

WIMiM

Faculty of Mechanical Engineering and Mechatronics

WEST POMERANIAN UNIVERSITY OF TECHNOLOGY  
IN SZCZECIN, POLAND

THE OFFER FOR INTERNATIONAL STUDENTS  
FOR THE YEAR 2021/2022  
FIRST DEGREE

	<b>Course title</b>	<b>Person responsible for the course</b>	<b>Semester (winter/summer)</b>	<b>ECTS points</b>	<b>Hours</b>
1	Aging and stabilization of polymers	Anna Szymczyk	winter/summer	2	30
2	Alternative hydrogen fuels for transportation and energetic	Alexander Balitskii	winter/summer	3	30
3	Basics of control theory for linear systems	Andrzej Bodnar	winter/summer	5	60
4	Basics of Mechanical Engineering Technology	Janusz Cieloszyk	winter/summer	5	60
5	Basics of technology manufacturing molds and dies	Janusz Cieloszyk	winter/summer	5	60
6	Biomass energy	Anna Majchrzycka	winter/summer	4	30
7	Communicating in Science and Engineering	Janusz Typek	winter/summer	3	30
8	Computer simulation of machines and processes	Andrzej Bodnar	winter/summer	5	45
9	Corrosion protection	Anna Biedunkiewicz	winter/summer	4	45
10	Critical thinking	Janusz Typek	winter/summer	3	30
11	Dimensional analysis, scaling and modeling for engineers	Janusz Typek	winter/summer	3	30
12	Elastomeric materials	Anna Szymczyk	winter/summer	5	60
13	Electrical engineering	Andrzej Bodnar	winter/summer	5	60
14	Electric drives	Andrzej Bodnar	winter/summer	4	45
15	Electronics-devices, circuits and applications	Andrzej Bodnar	winter/summer	5	45
16	Elements of reliability	Andrzej Bodnar	winter/summer	3	45
17	Energy Storage	Aleksandra Borsukiewicz	winter/summer	3	30
18	Engineering Graphics	Jacek Zapłata	winter/summer	3	45
19	Fault detection and diagnosis in engineering systems	Andrzej Bodnar	winter/summer	5	45
20	Fluid mechanics	Kamil Urbanowicz	winter/summer	4	45
21	Functional materials	Janusz Typek	winter/summer	5	60
22	Heat transfer	Anna Majchrzycka	winter/summer	4	60
23	Industrial controls	Andrzej Bodnar	winter/summer	4	45
24	Introduction to mechatronics	Andrzej Bodnar	winter/summer	3	30
25	Manufacturing techniques I	Małgorzata Garbiak	winter/summer	5	60
26	Materials Science I	Małgorzata Garbiak	winter/summer	3	30
27	Measurements and industrial instrumentation	Andrzej Bodnar	winter/summer	5	45
28	Measurement Uncertainty: Methods and Applications	Janusz Typek	winter/summer	4	30
29	Metal and ceramic composites	Anna Biedunkiewicz	winter/summer	3	30

	<b>Course title</b>	<b>Person responsible for the course</b>	<b>Semester (winter/summer)</b>	<b>ECTS points</b>	<b>Hours</b>
30	Metallic Materials	Małgorzata Garbiak	winter/summer	5	60
31	Metal machining	Janusz Cieloszyk	winter/summer	5	90
32	Modeling and Simulation of Manufacturing Systems	Andrzej Jardzioch	winter/summer	5	60
33	Modellierung und Simulation von Materialflusssystemen	Andrzej Jardzioch	winter/summer	5	60
34	Modern processes in manufacturing	Janusz Cieloszyk	winter/summer	4	45
35	Modern welding	Adam Sajek	winter/summer	4	45
36	Monitoring of machine tools and machining processes	Andrzej Bodnar	winter/summer	4	45
37	Nanomaterials	Anna Biedunkiewicz	winter/summer	3	30
38	Numerical methods in technical computing	Andrzej Bodnar	winter/summer	5	45
39	Physics of renewable energy sources	Janusz Typek	winter/summer	4	45
40	Polymer Processing	Magdalena Kwiatkowska	winter/summer	4	45
41	Power Generation Technologies	Aleksandra Borsukiewicz	winter/summer	4	45
42	Pumps, Fans and Compressors	Zbigniew Zapałowicz	winter/summer	3	45
43	Recycling I	Sandra Paszkiewicz	winter/summer	2	15
44	Renewable energy sources	Aleksandra Borsukiewicz	winter/summer	4	45
45	Solar energy	Zbigniew Zapałowicz	winter/summer	4	60
46	Steam and Gas Turbines	Zbigniew Zapałowicz	winter/summer	3	45
47	Steuerung von flexiblen Bearbeitungssystemen	Andrzej Jardzioch	winter/summer	5	60
48	Surface engineering	Jolanta Baranowska	winter/summer	5	60
49	Thermodynamics	Anna Majchrzycka	winter/summer	4	60
50	Tools in machining processes	Janusz Cieloszyk	winter/summer	5	60

<b>Course title</b>	Aging and stabilization of polymers		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	lecture		
<b>Person responsible for the course</b>	Anna Szymczyk	<b>E-mail address to the person</b>	Anna.Szymczyk@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-01	<b>ECTS points</b>	2
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	polish
<b>Hours per week</b>	2	<b>Hours per semester</b>	30
<b>Objectives of the course</b>	<p>This course aims for providing a profound understanding problems of aging of polymers and polymer nanocomposites their thermal and thermo-oxidative degradation, and methods of prevention of thermal and thermo-oxidative degradation, prediction of their life time.</p> <p>This course aims also for understanding of biodegradability of polymers and regulations and methods for biodegradability testing</p>		
<b>Entry requirements</b>	Basics of physical and organic chemistry.		
<b>Course contents</b>	<p>Chemical aging, physical aging, aging models and prediction of life time; Diffusion and solubility of oxygen in polymers; Testing and characterization of polymer stability; Thermal and thermo-oxidative degradation, photo-degradation, biodegradation, mechanical degradation; Hydrolysis and depolymerisation; Degradation of polymers during processing in the melt. Stabilizers. Stabilization against thermo-oxidative degradation. Influence of metals, fillers, and pigments on stability and degradation. An overview on the degradability of polymer nanocomposites. Flame retardancy. Flame reardant polymer nanocomposites.</p>		
<b>Assessment methods</b>	<p>Informative lecture with audio-visual resources.</p> <p>Written test.</p> <p>Material prepared by the students to discuss selected topics presented at lectures and their activity during the lecture.</p>		
<b>Recommended readings</b>	<ol style="list-style-type: none"> <li>1. Neiman M. B., Aging and stabilization of polymers, Springer, 2012</li> <li>2. Zweife H.I ., Stabilization of polymeric materials, Springer-Verlag, Heidelberg, 1998</li> <li>3. Crompton T. R., Thermo-oxidative degradation of polymers, Smithers Rapra, 2010</li> <li>4. P. M. Visakh, Y. Arao, Thermal degradation of polymer blends, composites and nanocomposites thermal degradation of polymer blends, composites and nanocomposites, Springer, Heidelberg New York, 2015</li> </ol>		
<b>Knowledge</b>	Student will aquire the knowledge about aging and degradation of different types of polymers, an undersanding of the implications of thermal degradation on material and product performance.		
<b>Skills</b>	Student will aquire aility of choosing of siutable stabilizer to prevent degradation of choosen polymers to prevent their degradation during processing and use ready products.		
<b>Other social competences</b>	The student willl have proven ability to use knowledge, skills and personal competences in the fild of aging and stabiliztion of polymer materials.		

<b>Course title</b>	Alternative hydrogen fuels for transportation and energetic		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	lecture		
<b>Person responsible for the course</b>	Alexander Balitskii	<b>E-mail address to the person</b>	Aleksander.Balicki@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-51	<b>ECTS points</b>	3
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	2	<b>Hours per semester</b>	30
<b>Objectives of the course</b>	The objective of the course is to give the student knowledge on alternative hydrogen fuels for transportation, energy industry, methods of "green" hydrogen production, properties of hydrogen resistant materials, environmental pollution . Upon successful completion of this course the student has knowledge on hydrogen fuels for transportation, energy production. Student is able to solve practical problems concerned with application of hydrogen fuels, hydrogen resistant materials in modern vehicle, energy technologies for improved environmental performance.		
<b>Entry requirements</b>	Basics of physics		
<b>Course contents</b>	Introduction to energy storage devices (ESDs) for the transport, energy sector. Classification of batteries for the private and public transport, installation of hydrogen buffer with intention of utilizing hydrogen. Nickel metal hydride (NiMH) batteries for the transport. Lithium-ion (Li-ion) batteries for the transport. Hydrogen and fuel cells for the transport and energy sector. Current hydrogen distribution methods. Fuel cells for the transport. Hydrogen and fuel cell challenges. Electrochemical capacitors (ECs). Current status of low-carbon vehicle technologies. Conventional internal combustion engine (ICE) vehicles. Advantages of HEV (hybrid vehicle). Battery electric vehicles (BEVs). Future developments of fuel cell electric vehicles (FCEVs). Proton exchange membrane (PEM) fuel cell stack. Hydrogen as fuel for fuel cell hybrids. Example of hybrid battery FCEV. Future developments and comparisons with BEVs. Technical prospects barriers. Durability and degradation of structural materials in hydrogen. Energy and power density of hydrogen as fuel. Explosions and improving the safety of hydrogen-powered vehicles tanks (pressure vessels).		
<b>Assessment methods</b>	Informative lecture with audio-visual resources. End - of - term presentation. Material prepared by the students to discuss selected topics presented at lectures and their activity during the lecture. Written test.		
<b>Recommended readings</b>	1. Richard Folkson, Alternative fuels and advanced vehicle technologies for improved environmental performance, Published by Woodhead Ltd. (Publishing Series in Energy), 2014 2. Brian Somerday, Petros Sofronis, Russell Jones, Effects of Hydrogen on Materials, Published by ASM International, Materials Park, Ohio (Printed in the USA), 2009 3. Pollet B.G., I.Staffell, J.L.Shang, V.Molkov, Fuel-cell (hydrogen) electric hybrid vehicles.- In: Alternative fuels and advanced vehicle technologies for improved environmental performance, Published by Woodhead Ltd. (Publishing Series in Energy), 2011 4. Richard P.Gangloff and Brian P. Somerday, Gaseous hydrogen embrittlement of materials in energy technologies, Published by Woodhead Ltd., 2012		
<b>Knowledge</b>	Students knows the basic materials used in the construction of hydrogen vehicles, hydrogen turbines, knows their properties, and knows the principles of their selection in the elements and functional parts of transport end energetic devices with zero carbon emission.		
<b>Skills</b>	Can assess the suitability of materials for the construction of hydrogen vehicle, hydrogen buffer and make the right choice according to known criteria.Students knows the basic materials used in the construction of hydrogen vehicles, energetic installations, knows their properties, and knows the principles of their selection in the elements and functional parts of hydrogen vehicle and energetic parts, resistant to hydrogen embrittlement. Can assess the suitability of materials for the construction of a hydrogen vehicle, hydrogen buffer and make the right choice according to known criteria.		
<b>Other social competences</b>	Students can effectively work in a team.		

<b>Course title</b>	Basics of control theory for linear systems		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	lecturing course / laboratory course / lecture		
<b>Person responsible for the course</b>	Andrzej Bodnar	<b>E-mail address to the person</b>	Andrzej.Bodnar@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-03	<b>ECTS points</b>	5
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	4	<b>Hours per semester</b>	60
<b>Objectives of the course</b>	<p>The lecture gives basic knowledge on linear control systems theory. Student has basic knowledge about elements of linear control systems - their description and characteristics, knows methods used for the system analysis and its quality assessment, knows basic rules of linear control system design.</p> <p>Exercises and laboratory help students to apply and deepen their knowledge on solving practical problems. Student is able to carry out analysis of a linear control system, can interpret transfer functions and frequency characteristics, find stability margins and tune controllers.</p> <p>Student can work effectively in a group.</p>		
<b>Entry requirements</b>	Basics of physics, differentiation, integration.		
<b>Course contents</b>	<p>Determination of an equivalent transfer function of a complex control system. Finding system response to impulse and step. Finding steady-state system response to harmonic excitation. Determination of control error. Using stability criteria for assessing limits of stability. Calculation of stability margins. Choosing controller settings.</p> <p>Determination of transfer functions and different characteristics of real systems. Finding response to a given signal. Checking stability conditions. Simulation of control system with the help of Matlab - Simulink.</p> <p>Mathematical models. Closed loop systems. System transfer function. Block diagrams. Pulse and step response. Frequency response and frequency bandwidth. Characteristics of basic elements and elementary control systems. Static errors and disturbance propagation. Stability criteria. Roots on s-plane. Performance specification. Basics of linear control system design; PID controller. MIMO systems. State variables. Controllability and observability. Dynamical observers. Robustness. Dealing with nonlinearities.</p>		
<b>Assessment methods</b>	<p>Lecture, laboratory and workshop.</p> <p>Observation of students work and cooperation in the group (laboratories)</p> <p>Two term-time written tests.</p> <p>Laboratory reports.</p> <p>Written exam.</p> <p>Observation of students work and cooperation in the group (laboratories).</p>		
<b>Recommended readings</b>	1. Clarence W. de Silva, Modeling and control of engineering systems., CRC Press/Taylor & Francis Group., Boca Raton, 2009		
<b>Knowledge</b>	Student has basic knowledge on linear control systems theory, on the description and characteristics of basic elements of control systems. Knows methods used for the system analysis, testing and its quality assessment. Knows basic rules of linear control system design.		
<b>Skills</b>	Students can apply their knowledge when solving practical problems on control - analysis, simulation, testing and design of simple systems.		
<b>Other social competences</b>	Students can effectively work in a team.		

<b>Course title</b>	Basics of Mechanical Engineering Technology		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / project course / lecture		
<b>Person responsible for the course</b>	Janusz Cieloszyk	<b>E-mail address to the person</b>	Janusz.Cieloszyk@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-05	<b>ECTS points</b>	5
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	4	<b>Hours per semester</b>	60
<b>Objectives of the course</b>	The engineering project course requires students to define, plan, and complete a mechanical engineering technology project and then to report on their work. This project may involve design, selection, test, process development, and feasibility study or problem analysis in a mechanical engineering technology context. Proposals for other types of mechanical engineering projects may be considered.		
<b>Entry requirements</b>	metal machining		
<b>Course contents</b>	<p>Analysis of selected methods to setup and fixings of machine parts  Experimental verification of deviations setup and fixings of machine parts  Research effort  Standardization of time selected technological operations  Produce complex job:  1. Sketch the production drawing of the part. Part should include shaping, milling, drilling, tapping, boring, slotting, surface grinding, etc.  2. Outline the processes. Prepare process plan for the part.  3. Prepare workshop layout and route sheet.  4. Produce the part, Calculate/select, set, observe and record the cutting parameters for each process.  5. List the cutting tools you have used. Also state specifications of each.  6 List the work holding devices you have used. Also state specifications of each.</p> <p>Classification of Manufacturing Process: Importance and perspective of machining process, Schematic.Representation of machining system, Different types of motions to generate different shapes.  Manufacturing Technology, manufacturing process of typical products, process planning. Technological data base.  Positioning and clamping, clamping devices. Tolerances,.  Economics and cycle times. Work flow and flexible manufacturing. Integrated design and manufacturing.  Knowledge of an advanced CAD/CAM package and an understanding of the principles and techniques of computer-driven manufacturing systems during typical part products.  CNC Machines: Configuration, co-ordinate systems, machine referencing, tool changing. CNC Programming: ISO standards, Manual Data Input, Conversational, Computer-Aided Part Programming. Introduction to CAD/CAM. Write based programs for component: turning, milling parts manufacture on a CNC milling machine</p>		
<b>Assessment methods</b>	Lectures, reading assignments, projects, discussions, video presentations, multimedia presentations, and web content Student attendance and participation in class sessions play a vital role in successful course completion. Students will be expected to complete written tests, projects, and homework assignments as specified by the teacher		
<b>Recommended readings</b>	1. Balic J.: Contribution to Integrated Manufacturing, Vienna, 1999, Vienna, 1999 2. F. C. Jelen and J. H. Black, McGraw Hill Int., Cost and Optimization Engineering,, McGraw Hill Int., 2011 3. Grzesik W., Advanced Machining Processes of Metallic Materials,, Elsevier, 2008 4. Shaw M. C., Metal Cutting Principles,, Oxford Univ. Press., Oxford, 1996 5. Modern Metal Cutting,, AB Sandvik Coromant 1994, Sandviken, Sweden, 1994		
<b>Knowledge</b>	Upon successful completion of this course, the student will be competent to perform the following: <ul style="list-style-type: none"> <li>• Understand various terminologies associated with the technological process</li> <li>• Recognize major types of technological process</li> <li>• Designing technological processes of simple parts, e.g. a shaft, body or disc parts</li> <li>• Prepare and read the documntation of the technological process of the selected part</li> </ul>		
<b>Skills</b>	Designs the manufacturing processes for typical parts, eg roller, wheel, gear, body, disc Evaluate the technology of the element's construction		
<b>Other social competences</b>	It will assess the relationship between the costs and features of any parts and the technology for their production. He will apply and evaluate pre-requisite technological processes for the manufacture of any products in the machine industry. Understand the importance and conditioning of technology process in creating any products in the machine industry.		

<b>Course title</b>	Basics of technology manufacturing molds and dies		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / project course / lecture		
<b>Person responsible for the course</b>	Janusz Cieloszyk	<b>E-mail address to the person</b>	Janusz.Cieloszyk@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-04	<b>ECTS points</b>	5
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	4	<b>Hours per semester</b>	60
<b>Objectives of the course</b>	The course requires students to define, plan, and complete a mechanical engineering technology of modles an dies and then to report on their work. This project may involve design, selection, test, process development, and feasibility study or problem analysis in a machining of modles an dies context.		
<b>Entry requirements</b>	metal machining, basis of mechanical engineering technology		
<b>Course contents</b>	<p>EDM machining in the manufacture of molds and dies</p> <p>Machining tools for EDM molds and dies</p> <p>Milling processes in machining of molds and dies</p> <p>Finishing processes in machining of parts of molds and dies</p> <p>Generating a machining program selected part of molds or dies</p> <p>Methods for machining of corners &amp; cavities in machining molds and dies</p> <p>Control and measuring selected part of mold or die</p> <p>Produce complex job:</p> <ol style="list-style-type: none"> <li>1. Sketch the production drawing of the die or mould. Part should include shaping, milling, drilling, tapping, boring, slotting, surface grinding, etc.</li> <li>2. Outline the processes. Prepare process plan for the die or mould.</li> <li>3. Prepare workshop layout and route sheet.</li> <li>4. Produce the the die or mould. Calculate/select, set, observe and record the cutting parameters for each process.</li> <li>5. List the cutting tools you have used. Also state specifications of each.</li> <li>6 List the work holding devices you have used. Also state specifications of each.</li> </ol> <p>Manufacturing Technology, manufacturing process of die and mould products, process planning. Technological data base. Positioning and clamping, clamping devices. Tolerances,</p> <p>Classification of Manufacturing Process: Importance and perspective of machining process of die and mould products, Schematic.Representation of machining system, Different types of motions to generate different shapes.</p> <p>Manufacturing Technology, manufacturing process of die and mould, process planning. Technological data base. Positioning and clamping, clamping devices. Tolerances., Economics and cycle times. Work flow and flexible manufacturing. Integrated design and manufacturing.</p> <p>Knowledge of an advanced CAD/CAM package and an understanding of the principles and techniques of computer-driven manufacturing systems during typical die and mould products.</p> <p>CNC Machines: Configuration, co-ordinate systems, machine referencing, tool changing. CNC Programming: ISO standards, Manual Data Input, Conversational, Computer-Aided Part Programming. Introduction to CAD/CAM. Write based programs for component of die and mould: turning, milling parts manufacture on a CNC milling machine</p>		
<b>Assessment methods</b>	Lectures, reading assignments, projects, discussions, video presentations, multimedia presentations, and web content Student attendance and participation in class sessions play a vital role in successful course completion. Students will be expected to complete written tests, projects, and homework assignments as specified by the teacher		
<b>Recommended readings</b>	<ol style="list-style-type: none"> <li>1. Application Guide, Application Guide :Die &amp; Mould Making,, Sandvik Cormoant, Sandvik Cormoant, 2005</li> <li>2. High speed machining and conventional die and mould machining, Sandvik Cormoant, Sandviken, 2005</li> <li>3. Y. Koren,, Computer Control of Manufacturing Systems, McGraw-Hill, 2011</li> <li>4. F. W. Wilson,, Numerical Control in Manufacturing, McGraw-Hill Book Company New York., 2011</li> </ol>		
<b>Knowledge</b>	Upon successful completion of this course, the student will be competent to perform the following: <ul style="list-style-type: none"> <li>• Understand various terminologies associated with the manufacturing process of die and mould, process planning.</li> <li>• Recognize major types of manufacturing process of die and mould, process planning.</li> <li>• Design the technological process of die and mould, process planning.</li> </ul>		
<b>Skills</b>	<p>Designs the manufacturing processes for typical molds and die</p> <p>Uses methods of machining and assembly, conditions for their implementzation in the case of typical molds and dies</p> <p>Selects elements of the MTHW system (machine tool, holder, tool, object) for transitions, operations in various manufacturing methods od molds and dies</p>		
<b>Other social competences</b>	It will assess the relationship between the costs and features of any die and mould products, and the techniques for their production. He will apply and evaluate pre-requisite technological processes for the manufacture of any of die and mould products. Understand the importance and conditioning of manufacturing techniques in the process of creating any die and mould.		

<b>Course title</b>	Biomass energy		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	lecture		
<b>Person responsible for the course</b>	Anna Majchrzycka	<b>E-mail address to the person</b>	Anna.Majchrzycka@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-06	<b>ECTS points</b>	4
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	2	<b>Hours per semester</b>	30
<b>Objectives of the course</b>	On successful completion of this module the students should be able to : define biomass and biomass characteristics, explain methods of biomass conversion (gasification, pyrolysis, anaerobic digestion), explain methods of production of liquid and solid biofuels, explain principles of operation of biomass conversion installations, calculations concerning problems of biomass combustion, understand production of biopower (combine heat and power production) explain principles of operation of biomass combustion and co-firing installations.		
<b>Entry requirements</b>	Fundamentals of mathematics, physics, chemistry recommended		
<b>Course contents</b>	Biomass and its characteristics. Different methods of biomass conversion Biopower ( industrial combustion of biomass, co-firing, CHP systems)		
<b>Assessment methods</b>	Lecture ,PPT presentation Written examination		
<b>Recommended readings</b>	1. Côté, Wilfred A- Biomass utilization, ed.Wilfred A. Côté ; North Atlantic Treaty Organization. Scientific, 1983 2. Higman Chris; van der Burgt Maarten, Gasification, Elsevier, 2003 3. Klass Donald L, Fuels from biomass and wastes Donald L. Klass, George H. Emert,1981, Donald L. Klass, George H. Emert, 1981 4. Overend, R.P.- Fundamentals of thermochemical biomass conversion ,, ed. R.P.Overend, T.A. Milne, L.K. Mudg, 1985		
<b>Knowledge</b>	Student has knowledge on: biomass and its properties, methods of biomass conversion (gasification, pyrolysis, anaerobic digestion), methods of liquid, gaseous and solid biofuels production, principles of operation of biomass conversion installations, calculations of biomass combustion, production of biopower (combine heat and power production), principles of operation of biomass combustion and co-firing installations.		
<b>Skills</b>	On successful completion of this module the students should be able to use methods of thermochemical conversion of biomass. and solve the practical problems in the field of bio-energy production.		
<b>Other social competences</b>	Student is aware of the importance and understanding of the effects and results of engineering activities of biomass conversion.		

<b>Course title</b>	Communicating in Science and Engineering		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	lecture		
<b>Person responsible for the course</b>	Janusz Typek	<b>E-mail address to the person</b>	Janusz.Typek@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-09	<b>ECTS points</b>	3
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	2	<b>Hours per semester</b>	30
<b>Objectives of the course</b>	<p>The course will teach how to use English to carry out everyday activities at university, such as understanding English language science books, how to write a lab report, emails, how to prepare a presentation.</p> <p>The student will have the ability to write lab report and prepare presentation.</p> <p>The student will be able to work in a group in preparation of project work.</p>		
<b>Entry requirements</b>	Basics of English taught as a foreign language in the first and second year of university study.		
<b>Course contents</b>	<p>A review of basic notions in mathematics, physics and chemistry. Reading mathematical expressions. English used in presenting characteristics of materials (metals, ceramics, polymers, composites, advanced materials).</p> <p>Preparing lab reports.</p> <p>Preparing and delivering seminar and presentation.</p> <p>Writing a research paper.</p> <p>English for scientific correspondence and socializing.</p> <p>Final test.</p> <p>Presentation of project work.</p>		
<b>Assessment methods</b>	<p>Lecture</p> <p>Discussion</p> <p>Seminar</p> <p>Final test</p> <p>Project work</p> <p>Continuous assessment</p>		
<b>Recommended readings</b>	<p>1. Iris Eisenbach, English for Materials Science and Engineering, Vieweg+Teubner Verlag   Springer Fachmedien, Wiesbaden, 2011</p> <p>2. Heather Silyn-Roberts, Writing for Science and Engineering, Butterworth-Heinemann, 2002</p>		
<b>Knowledge</b>	The student will have the knowlegde to use English to carry out everyday activities at university, such as understanding English language science books, will known how to prepare lab reports, how to prepare a scientific presentation		
<b>Skills</b>	Student will be able to write lab report and prepare presentation on a given scientific subject.		
<b>Other social competences</b>	Will be able to work in a group to prepare presentation or project work		

<b>Course title</b>	Computer simulation of machines and processes		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / lecture		
<b>Person responsible for the course</b>	Andrzej Bodnar	<b>E-mail address to the person</b>	Andrzej.Bodnar@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-10	<b>ECTS points</b>	5
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	3	<b>Hours per semester</b>	45
<b>Objectives of the course</b>	<p>The lecture gives basic knowledge on methods of description, modeling and simulation of mechanical and mechatronic systems as well as production processes.</p> <p>Laboratory exercises enable to apply selected methods of the theory in practice.</p> <p>Upon successful completion of this course the student should be able to prepare data, build models and carry out computer simulations of mechatronic systems and typical production processes, can analyze and interpret results.</p> <p>Student can effectively cooperate in a team.</p>		
<b>Entry requirements</b>	Basic knowledge on differential equations recommended.		
<b>Course contents</b>	<p>Modeling of systems with friction, with heat sources and heat transfer, electromagnetic actuators, electric motors and drives, hydraulic systems. Application of MATLAB tools for control system simulation. Simulation of production processes using Em-Plant.</p> <p>Introduction to computer simulation - areas of application, basic problems, advantages. Main stages of computer simulation. Physical and mathematical models of simple dynamic systems. Model simplification, linearization, scale effect. Simulation constants and variables, inputs and outputs. Process description, system design, prediction of behavior in different conditions.</p> <p>Modeling of mechanical structures - modal analysis, eigenvalues and vibration modes.</p> <p>Modeling of systems with friction, systems with heat sources and heat transfer, actuators, electromagnetic actuators, electric motors and drives, hydraulic systems. Simulation accuracy and stability.</p>		
<b>Assessment methods</b>	<p>Lecture and laboratory.</p> <p>One written test.</p> <p>Laboratory reports.</p> <p>Observation of students's work in the team.</p>		
<b>Recommended readings</b>	<p>1. Giurgiutiu V., Lyshevski S.E., Micromechatronics, Modeling, analysis and design with MATLAB, CRC Press, Boca Raton, London, New York, 2009, 2</p> <p>2. Clearence W.S., Modelling and control of engineering systems., CRC Press, Boca Raton, 2009</p>		
<b>Knowledge</b>	Students have basic knowledge on methods of description, modeling and simulation of mechanical and mechatronic systems as well as production processes.		
<b>Skills</b>	Upon successful completion of this course the student should be able to prepare data and models and carry out computer simulations of mechatronic systems and typical production processes.		
<b>Other social competences</b>	Students can effectively work in a team.		

<b>Course title</b>	Corrosion protection		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / lecture		
<b>Person responsible for the course</b>	Anna Biedunkiewicz	<b>E-mail address to the person</b>	Anna.Biedunkiewicz@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-11	<b>ECTS points</b>	4
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	3	<b>Hours per semester</b>	45
<b>Objectives of the course</b>	Making students knowledge and understanding about corrosion phenomenon in order to appreciation of the main reason of the destruction and erosion of the constructions and in order to aware using of the methods in corrosion protection; skills in materials selection for application to work in difficult conditions, and selection of corrosion protection methods.		
<b>Entry requirements</b>	Knowledge about general chemistry, physics and materials science. Basic knowledge of the chemical composition, structure, materials and physicochemical changes.		
<b>Course contents</b>	Galvanic cell-polarization phenomenon. High temperature corrosion. Pitting corrosion. Potentiodynamic curves - corrosion properties test of steels and alloys. Salt spary test - SST. Galvanic corrosion - welding joint. Electrochemical etching. Corrosion principles. Forms of corrosion. Corrosion testing. Metods of corrosion prevention and protection. Materials selection: metals and alloys, metal purification, non-metallic materials. Alteration of environment: changing medium, inhibitors. Design: wall thickness, design rules. Cathodic and anodic protection: protective currents, anode selection, prevention of stray-current effects. Coatings: metallic, other inorganic and organic. Economic considerations. Corrosion control standards. Pollution control.		
<b>Assessment methods</b>	Informative lecture with audiovisual aids, ie. educational movies, computer presentations . Experimental tests in laboratory. Laboratory: On the basis of student reports grade is received . Lecture. After completion of the reports the student proceeds to pass a written exam and receive a passing grade.		
<b>Recommended readings</b>	1. M.G.Fontana, N.D. Greene, Corrosion Engineering, Ed.McGraw-Hill Book Company, USA, 1978 2. Alec Groysman, Corrosion for everybody, Springer, Dordrecht, London, Heidelberg, New York,, 2010 3. Ph.Marcus, F.Mansfeld, Analytical Methods in Corrosion Science and Engineering, CRC Taylor & Francis Group, 2006		
<b>Knowledge</b>	Student has knowledge and understanding about corrosion phenomenon in order to appreciation of the main reason of the destruction and erosion of the constructions and in order to aware using of the methods in corrosion protection.		
<b>Skills</b>	Student has skills in materials selection for application to work in difficult conditions, prevention uring design of the constructions, and selection of corrosion protection methods.		
<b>Other social competences</b>	Student has awareness of environmental and economical impacts of corrosion.		

<b>Course title</b>	Critical thinking		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	lecture		
<b>Person responsible for the course</b>	Janusz Typek	<b>E-mail address to the person</b>	Janusz.Typek@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-12	<b>ECTS points</b>	3
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	2	<b>Hours per semester</b>	30
<b>Objectives of the course</b>	<p>To increase the ability to reason well and to improve the analytical skills.</p> <p>Students will be able to use elementary methods of building strong arguments.</p> <p>Student will be able to understand the essential principles involved in the practice of reasoned decision making.</p> <p>Student will be able to work in a group and engage in discussion.</p>		
<b>Entry requirements</b>	No prerequisites required.		
<b>Course contents</b>	<p>Reasoning from evidence: Fallacies and logic; Truth, knowledge and belief; Identifying flaws in the argument</p> <p>Inductive and deductive reasoning</p> <p>Evaluating sources of evidence</p> <p>Scientific method and critical reasoning</p>		
<b>Assessment methods</b>	<p>Lecture</p> <p>Discussion</p> <p>Presentation</p> <p>Oral presentation</p> <p>Essay</p> <p>Continuous assessment</p>		
<b>Recommended readings</b>	<p>1. T. Bowell and G. Kemp, Critical thinking: A concise guide, Routledge, 2005</p> <p>2. S. Cottrell, Critical thinking skills, Palgrave Macmillan, 2005</p>		
<b>Knowledge</b>	The student will be able to: recognise the arguments of specialist authors; locate arguments in key texts; recognise the difference between critical analysis and other kinds of writing (e.g. description).		
<b>Skills</b>	The student will be able to: engage with the arguments used by both experts and their peers; produce better critical analytical writing of their own for marked assignments.		
<b>Other social competences</b>	Student will be able to work in a group and be involved in discussion.		

<b>Course title</b>	Dimensional analysis, scaling and modeling for engineers		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	lecture		
<b>Person responsible for the course</b>	Janusz Typek	<b>E-mail address to the person</b>	Janusz.Typek@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-13	<b>ECTS points</b>	3
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	polish
<b>Hours per week</b>	2	<b>Hours per semester</b>	30
<b>Objectives of the course</b>	<p>To gain knowledge about dimensional analysis, scaling and modelling.</p> <p>To be able to use dimensional analysis, scaling and modelling in engineering applications.</p> <p>To be able to work in a group.</p>		
<b>Entry requirements</b>	General knowledge of physics and mathematics.		
<b>Course contents</b>	<p>Basic and derived units of measurements. Scales of units and conversion between different systems of units.</p> <p>Dimensions and dimensional consistency of equations. Dimensionless quantities, equations and relationships. Buckingham's Pi Theorem. Forming dimensionless relationships, writing governing equations in terms of dimensionless variables.</p> <p>Similarity and model testing</p> <p>Use of Dimensional Analysis to design experiments and present experimental data.</p> <p>Projects and final test</p>		
<b>Assessment methods</b>	<p>Lecture</p> <p>Discussion</p> <p>Seminar</p> <p>Final test</p> <p>Continuoes assessment</p> <p>Project work</p>		
<b>Recommended readings</b>	<p>1. T. Szirtes, Dimensional analysis and modelling, Elsevier, 2007</p> <p>2. J. Kunes, Similarity and modelling in science and engineering, Springer, 2012</p>		
<b>Knowledge</b>	The student will have the knowlegde about dimensional analysis and modelling in simple experimental situations		
<b>Skills</b>	Student will be able to apply the obtained knowledge in simple experimental situations and use it in simple modelling.		
<b>Other social competences</b>	Student will be able to work in a group to prepare presentation or project work.		

<b>Course title</b>	Elastomeric materials		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / lecture		
<b>Person responsible for the course</b>	Anna Szymczyk	<b>E-mail address to the person</b>	Anna.Szymczyk@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-37	<b>ECTS points</b>	5
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	4	<b>Hours per semester</b>	60
<b>Objectives of the course</b>	<p>Student will acquire knowledge about chemistry, technology and processing of rubber and TPE.</p> <p>Student will be able to compare the chemical structure, properties, compounding, processes and applications of the main types of rubber TPE. Reference is made to the place of TPEs relative to vulcanised rubber and thermoplastics and the future potential for these materials.</p> <p>Developing the ability of the study and analyses of received results and estimating of uncertainty in measurement in the application for conducted laboratory tests.</p> <p>Developing the ability of applying of selected knowledge from the lectures for solving problems in practice.</p>		
<b>Entry requirements</b>	There is no specific entry requirement for these course.		
<b>Course contents</b>	<p>Training in rubber compounding, establishing of curing parameters, processing and testing of rubber. Visit in rubber company.</p> <p>Synthesis of polyester thermoplastic elastomer.</p> <p>Injection moulding processes training for polyester TPE.</p> <p>Testing of hardness and mechanical properties of polyester TPE.</p> <p>Elastomers: definition, type of elastomer materials and their application, rubber elasticity: stress-strain relationships, elongation and compression set.</p> <p>Rubber compound: polymer, curing system, fillers, plasticizers, antioxidants. Type of rubbers. Rubber vulcanization: chemistry and technology. Rubber processing. Rubber for food application.</p> <p>Thermoplastic elastomers (TPE): Types of thermoplastic elastomers. TPE-S, TPE-O, TPE-A, TPE-E, TPE-U, TPE-V. Applications of TPE. Processing methods applicable to TPE. Recycling of TPE.</p> <p>Bio-based thermoplastic elastomers.</p> <p>Elastomeric nanocomposites.</p>		
<b>Assessment methods</b>	<p>Informative lecture with audio-visual resources</p> <p>Laboratory training</p> <p>Test</p> <p>Material prepared by the students to discuss selected topics presented at lectures and their activity during the lecture.</p> <p>On the basis of elaborated laboratory reports the student receives a final grade.</p>		
<b>Recommended readings</b>	<p>1. Mark J.E., Erman B., Erlich F.R., The Science and Technology of Rubber, Elsevier, Amsterdam 2005, Elsevier, Amsterdam, 2005</p> <p>2. Holden G., Kilcherdorf H.R., Quirk R.P., Thermoplastic Elastomers, 3rd Ed, Hanser Publishers, Munich, 2004</p> <p>3. Sabu T., Ranimol S., Rubber Nanocomposites: Preparation, Properties and Applications, John Wiley &amp; Sons, Canada, 2010</p>		
<b>Knowledge</b>	Student will acquire knowledge about chemistry, technology and processing of rubber.		
<b>Skills</b>	As a result of the course the student will be able to solve the problems regarding applications and processing of rubber and thermoplastic elastomers.		
<b>Other social competences</b>	The student will have proven ability to use knowledge, skills and personal competences in the field of rubber materials.		

<b>Course title</b>	Electrical engineering		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	lecturing course / laboratory course / lecture		
<b>Person responsible for the course</b>	Andrzej Bodnar	<b>E-mail address to the person</b>	Andrzej.Bodnar@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-14	<b>ECTS points</b>	5
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	4	<b>Hours per semester</b>	60
<b>Objectives of the course</b>	<p>Student has knowledge on DC and AC network analysis and testing, know principles of working of electric machines</p> <p>Students should be able to solve typical problems connected with calculation of currents and power in DC and AC networks, apply basic laws in electricity and magnetism, select and use measuring instruments.</p> <p>Students can effectively cooperate in a team.</p>		
<b>Entry requirements</b>	Finished course on physics recommended.		
<b>Course contents</b>	<p>Charging of circuits with capacitors - voltage, charge. Simple DC nets and application of basic network theorems and solving methods. Equivalent Thevenin and Norton sources. Sinusoidal and phasor representation of voltage and current in a single phase AC circuit. AC network analysis with the help of complex numbers. Equivalent resistance, T-Y connections, voltage and current dividers. Combination of R, L and C in series and parallel. Resonance. Power calculations in AC circuits: instantaneous power, power factor, apparent power, reactive power, power triangle, power factor. Three-phase AC nets: line and phase voltage/current relationship for star and delta connections. Balanced three phase voltages and unbalanced impedances. Power losses and voltage drops in transmission lines and cables. Analysis of two-terminal two-port and multi-port circuits. DC and AC network examination. Connecting circuits according to a schematic and performing measurements: measurements in AC/DC circuits current, RLC resonance, mutual- and self- inductance, hysteresis in magnetic circuits, transformer, transient states in DC circuits.</p> <p>Basic electrical quantities and their units. Electric field. Capacitor. Potential and potential difference, electromotive force, current and resistance. Basic network theorems. Equivalent Thevenin and Norton sources. Step response. Sinusoidal and phasor representation of voltage and current. Single phase AC circuit. Circuit analysis in DC and AC steady-state. Network analysis with the help of complex numbers. Equivalent resistance, T-Y connections, voltage and current dividers. Combination of R, L and C in series and parallel. Resonance. Power relations in AC circuits: instantaneous power, power factor, apparent power, reactive power, power triangle, complex power. Power factor correction. Magnetic field. Lenz' Law. Coupled circuits. Transformer: principle of operation and construction of single-phase transformer, phasor diagram and equivalent circuits, losses, efficiency and voltage regulation, nonlinearity. Three-phase AC circuits: line and phase voltage/current relationship for star and delta connections. Balanced three phase voltages and unbalanced impedances. Transmission lines: parameters, steady-state performance of overhead transmission lines and cables, voltage drops. Analysis of two-terminal two-port and multi-port circuits. Measurements in DC and AC circuits.</p>		
<b>Assessment methods</b>	<p>Lecture, exercises and laboratory</p> <p>Written exam and laboratory reports.</p> <p>Two term-time tests.</p> <p>Observation of student's work in a team.</p>		
<b>Recommended readings</b>	<ol style="list-style-type: none"> <li>1. Del Toro V., Principle of Electrical Engineering, PHI, 2018</li> <li>2. Nagrath I. J., Basic Electrical Engineering, Tata Mc Graw Hill., 2001</li> </ol>		
<b>Knowledge</b>	Students have basic knowledge on DC and AC network analysis and testing.		
<b>Skills</b>	Students can test and analyze DC and AC networks.		
<b>Other social competences</b>	Students can cooperate in teams.		

<b>Course title</b>	Electric drives		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / lecture		
<b>Person responsible for the course</b>	Andrzej Bodnar	<b>E-mail address to the person</b>	Andrzej.Bodnar@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-15	<b>ECTS points</b>	4
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	3	<b>Hours per semester</b>	45
<b>Objectives of the course</b>	<p>The course gives basic knowledge on drives equipped with electrical motors (motors and their control systems - rules of functioning and technical solutions, selection of the motor and the drive controller).</p> <p>Students get practical experience in drive modelling, basic design calculations and measurements.</p> <p>Students can effectively work in a team.</p>		
<b>Entry requirements</b>	<p>Physics recommended.</p> <p>Finished courses on "electrical engineering" and "fundamentals of control systems".</p>		
<b>Course contents</b>	<p>Servo-drive testing. Drive efficiency and power losses. Testing positioning accuracy. Tool path errors. Stepping motors.</p> <p>Electric drives - basic characteristics, rated values. Fundamental information on DC, AC and stepping motors - types, construction, static and dynamic characteristics, heating, limitations, speed control, acceleration and braking. Servo-drives - structure, transfer functions, dynamic response, control quality, static and dynamic errors.</p> <p>Power units, drive control units - thyristor controller, PWM converter, vector control, drive safety. Position and displacement measuring systems - encoder, resolver, inductosyn, laser systems. Linear drives - motors, features, technological problems.</p>		
<b>Assessment methods</b>	<p>Lecture and laboratory.</p> <p>Oral exam, test and laboratory reports.</p> <p>Observation of student's work.</p>		
<b>Recommended readings</b>	<ol style="list-style-type: none"> <li>1. Harter J., Electromechanics. Principles, concepts and devices, Prentice Hall, 2001</li> <li>2. Rashid M.H., Power electronics, Pearson Ed. - Prentice Hall, London, 2004</li> <li>3. Paul Krause, Oleg Wasynczuk, Scott D. Sudhoff, Analysis of Electric Machinery and Drive Systems, Wiley Interscience, 2002</li> </ol>		
<b>Knowledge</b>	Students have knowledge on working principles, characteristics and properties of drives equipped with electrical motors and their control systems - rules of functioning and technical solutions, motor and controller selection.		
<b>Skills</b>	Students can use information about drive load and electrical motor data for the motor and controller selection, can carry out simple measurements in the drive, can recognize typical failures.		
<b>Other social competences</b>	Students can cooperate in a team.		

<b>Course title</b>	Electronics-devices, circuits and applications		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / lecture		
<b>Person responsible for the course</b>	Andrzej Bodnar	<b>E-mail address to the person</b>	Andrzej.Bodnar@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-16	<b>ECTS points</b>	5
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	polish
<b>Hours per week</b>	3	<b>Hours per semester</b>	45
<b>Objectives of the course</b>	<p>The course gives basic knowledge on characteristics of electronic elements and their applications (power supplies, amplifiers, generators, logical systems and measuring instruments electronics).</p> <p>Student can analyze simple electronic circuits, can assess properties of electronic devices, can carry out measurements.</p> <p>Student can effectively work in a group.</p>		
<b>Entry requirements</b>	Finished course on physics recommended.		
<b>Course contents</b>	<p>Power supply. Operational amplifier. Function generator. Logical system. ADC. Measuring instruments electronics.</p> <p>Power supplies. Electronic devices used (diodes, thyristors, triacs, transistors, LEDs), voltage and current stabilizers and converters. Examples of IC stabilizers, circuitry of stabilizers and converters. Amplifiers. Transistor as an amplifier, operational amplifiers, instrumentation amplifiers, field effect transistors, power amplifiers, PWM, active filters. Examples of application in measuring instruments and control devices. Generators. Sine and function generators, clock pulse generators, PLL. Applications in radio transmitters and receivers. Electronic switching. Logical gates, flip-flops, time dependent switching, analogue timers. Applications of timing IC's. Digital systems. Registers, counters, adders, ALUs, data storage devices. ADCs and DACs. Basic types, conversion speed and errors. Quantisation noise, aliasing, leakage. Example of an ADC datasheet. Influence of temperature. Heat generation in electronic devices, heat sinks, working point stabilization, thermal noise reduction. Example of a heat-sink calculation.</p>		
<b>Assessment methods</b>	<p>Lecture and laboratory.</p> <p>One written test and laboratory reports.</p> <p>Observation of student's work in a team.</p>		
<b>Recommended readings</b>	<p>1. Forrest M. Mims III, Getting started in electronics, Master Publ. Inc., 2003</p> <p>2. Bishop O., Electronics. Circuits and systems, Elsevier, Amsterdam, 2011</p>		
<b>Knowledge</b>	Students have knowledge on characteristics of electronic elements and their applications (power supplies, amplifiers, generators, logical systems and measuring instruments electronics).		
<b>Skills</b>	Students understand role of electronic elements in electronic circuits (power supplies, amplifiers, generators, logical systems and measuring instruments electronics), can carry out basic measurements in the circuit and detect main faults.		
<b>Other social competences</b>	Students can cooperate in a team.		

<b>Course title</b>	Elements of reliability		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / lecture		
<b>Person responsible for the course</b>	Andrzej Bodnar	<b>E-mail address to the person</b>	Andrzej.Bodnar@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-17	<b>ECTS points</b>	3
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	3	<b>Hours per semester</b>	45
<b>Objectives of the course</b>	<p>The lecture gives basic theoretical knowledge on methods of description, assessment and testing of reliability and life of components and whole technical systems.</p> <p>Laboratory exercises teach students selected ways of application of the theory in practice.</p> <p>Upon successful completion of this course the student can assess the reliability of simple technical systems.</p> <p>Student can effectively work in a team.</p>		
<b>Entry requirements</b>	Probability theory and statistics recommended.		
<b>Course contents</b>	<p>Calculation of reliability of simple systems in MatLab and Excel.</p> <p>Reliability tuning.</p> <p>Calculation and plotting reliability functions of repairable and redundant CFR systems.</p> <p>Empirical measures of reliability. Reliability and risk functions. Distributions in modeling of life. Serial, parallel and complex systems; the triangle-star transformation. Models of failure. Constant failure rate systems. MTTF. Examples of the reliability assessment. Dispensing reliability between components, system reliability improvement and its costs. Life testing. Reliability data bases. Remarks on reliability of electronic systems and reliability of machine tools and machining processes.</p>		
<b>Assessment methods</b>	<p>Lecture and laboratory.</p> <p>One written test and laboratory reports.</p> <p>Observation of student's work.</p>		
<b>Recommended readings</b>	1. Grosh D.L., A Primer of Reliability Theory., Wiley, New York, 1989		
<b>Knowledge</b>	Students have theoretical knowledge on methods of description, assessment and testing of reliability and life of components and whole technical systems.		
<b>Skills</b>	<p>Students can apply theoretical knowledge in practice.</p> <p>Upon successful completion of this course the student will know how to assess and increase life and reliability and how to tune reliabilities of elements of technical systems.</p>		
<b>Other social competences</b>	Students are able to cooperate effectively in a team.		

<b>Course title</b>	Energy Storage		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	lecture		
<b>Person responsible for the course</b>	Aleksandra Borsukiewicz	<b>E-mail address to the person</b>	Aleksandra.Borsukiewicz@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-15-Z	<b>ECTS points</b>	3
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	2	<b>Hours per semester</b>	30
<b>Objectives of the course</b>	Students will be gave the fundamental knowledge about energy storage in large and small-scale energy systems.		
<b>Entry requirements</b>	Physics - level of first degree technical studies, Chemistry - level of first degree technical studies, Mathematics - level of first degree technical studies, Thermodynamics - level of first degree technical studies,		
<b>Course contents</b>	Periodic storage; Problem of load leveling; Thermal energy storage: sensible heat, latent heat (inorganic and organic phase change materials), reversible chemical reactions; Mechanical energy storage: energy storage in pressurized gas, potential energy storage using gravity, hydroelectric power (pumped storage technology), kinetic energy storage (flywheel storage technology), pneumatic storage technology; Electrochemical energy storage (battery storage technologies); Electromagnetic energy storage; Hydrogen (production and storage); Energy storage for medium to large scale applications, Energy use and storage in vehicles.		
<b>Assessment methods</b>	An informative and problem-oriented lecture Writing control work		
<b>Recommended readings</b>	1. Huggins RA., Energy Storage, Springer, 2010 2. Zito R., Energy Storage-a new approach, Wiley, 2010		

<b>Course title</b>	Engineering Graphics		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	project course / lecture		
<b>Person responsible for the course</b>	Jacek Zapłata	<b>E-mail address to the person</b>	Jacek.Zaplata@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-52	<b>ECTS points</b>	3
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	3	<b>Hours per semester</b>	45
<b>Objectives of the course</b>	<p>The participating students gain knowledge in subject of engineering graphics.</p> <p>The participating students gain ability to create technical drawings.</p> <p>The participating students practice teamwork.</p>		
<b>Entry requirements</b>	The course does not require any previous knowledge. The common knowledge of geometry and trigonometry would be helpful.		
<b>Course contents</b>	<p>Orthographic sketching: first angle projection</p> <p>Pictorial sketching: isometric projection</p> <p>Creating technical drawings of 5 elements (as the students' skills grow - the difficulty of elements increases).</p> <p>Practicing the abilities of drawing: views, sectional views, dimensions, threads.</p> <p>Principles of projection: first angle projection, third angle projection, isometric projection, oblique projection</p> <p>Lines and lettering</p> <p>Types of drawings (component, assembly, detail drawings, graphs)</p> <p>Views, auxiliary views, sectional views</p> <p>Principles of dimensioning and tolerances</p> <p>Intersection of surfaces</p> <p>Presenting threads and welds</p>		
<b>Assessment methods</b>	<p>Lecture, Tutorial, Self-study</p> <p>Regular checking-up of students technical drawings</p> <p>Written end-of-term test</p>		
<b>Recommended readings</b>	<ol style="list-style-type: none"> <li>1. Thomas E. French, Carles J. Vierck, The fundamentals of engineering drawings &amp; graphic technology, McGraw-Hill Book Company</li> <li>2. Colin H. Simmons, Dennis E. Maguire, N. Phelps, Manual of Engineering Drawing, Elsevier</li> <li>3. K. Venkata Reddy, Textbook of Engineering Drawing, BS Publications</li> <li>4. David A. Madsen, David P. Madsen, Engineering Drawing and design, Delmar Cengage Learning</li> </ol>		

<b>Course title</b>	Fault detection and diagnosis in engineering systems		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / lecture		
<b>Person responsible for the course</b>	Andrzej Bodnar	<b>E-mail address to the person</b>	Andrzej.Bodnar@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-18	<b>ECTS points</b>	5
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	polish
<b>Hours per week</b>	3	<b>Hours per semester</b>	45
<b>Objectives of the course</b>	<p>The course gives basic knowledge on methods used in engineering systems for fault detection and placement. Examples show how diagnostic methods can be used in different machines and processes. Laboratory helps students to get basic experience in application of knowledge obtained during lectures and studying of literature.</p> <p>Students understand methods and are able to identify, formulate, and solve problems connected with diagnosing faults in engineering systems. Students can use various diagnostic techniques and modern instrumentation.</p> <p>Student can effectively work in a team.</p>		
<b>Entry requirements</b>	Basic course on measurements recommended.		
<b>Course contents</b>	<p>Signal processing for finding symptoms of faults. Spectral and cepstral analysis. Finding symptoms hidden in noise. Computerised monitoring system. Failures in drives. Fault detection through modal analysis. Applications of thermography.</p> <p>Evaluation of machine health, reliability, prognosis. Failure diagnostics techniques. Symptoms and their choice. Application of vibration and experimental modal analysis, Fourier and time-frequency transformations, signature analysis, model supported diagnostics. Modulation, sidebands, envelope, cepstrum. Diagnostic experiment planning and preparation, signal processing. Failures in rotating machines and control systems. A/D conversion, signal processing and instrumentation.</p>		
<b>Assessment methods</b>	<p>Lecture and laboratory.</p> <p>Term test and laboratory reports.</p> <p>Observation of student's work.</p>		
<b>Recommended readings</b>	<p>1. Monolakis D.G., Ingle V.K.: Applied digital signal processing., Cambridge Univ. Press, 2011</p> <p>2. Randall R.B.: Vibration-based condition monitoring., Wiley, New York, 2011</p>		
<b>Knowledge</b>	The course gives basic knowledge on methods used in engineering systems for fault detection and placement. Students know how diagnostic methods can be used in different machines and processes.		
<b>Skills</b>	Students have basic experience in application of knowledge obtained during lectures and studying of literature. Students understand methods and are able to identify, formulate, and solve problems connected with diagnosing faults in engineering systems. Students can use various diagnostic techniques and modern instrumentation.		
<b>Other social competences</b>	Students can effectively work in groups. Students understand the role of continuous widening and deepening of their knowledge and experience.		

<b>Course title</b>	Fluid mechanics		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	lecturing course / lecture		
<b>Person responsible for the course</b>	Kamil Urbanowicz	<b>E-mail address to the person</b>	Kamil.Urbanowicz@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-53	<b>ECTS points</b>	4
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	3	<b>Hours per semester</b>	45
<b>Objectives of the course</b>	Fluid Mechanics is course introducing the fundamental principles of fluid mechanics and simple engineering applications. Upon successful completion of this course, the student will understand the fundamentals of fluid mechanics and will have skills to perform calculations of simple practical systems.		
<b>Entry requirements</b>	Elementary mathematics (integrals, partial derivatives), completed Solid mechanics course		
<b>Course contents</b>	<p>Kinematics: streamline, fluid element path, acceleration - calculations in the Euler system</p> <p>Calculation of fluid pressure on flat and curved walls</p> <p>test 1</p> <p>Bernoulli equation - applications</p> <p>Liquid outflow through holes in tanks, hydrodynamic reactions</p> <p>Calculation of the real liquid flow in pressure lines</p> <p>test 2</p> <p>Introduction to Fluid Mechanics and basic concepts: fluid element, hydrodynamic field, physical properties of fluids</p> <p>Hydrostatics: pressure field, liquid pressure on vessel walls, buoyancy, etc.</p> <p>Fluid kinematics: streamline, fluid element path, fluid state description methods, fluid element acceleration, local motion of a fluid element: deformation velocity tensor</p> <p>The principle of conservation of mass. Continuity equation</p> <p>The principle of conservation of momentum. Stress tensor</p> <p>The principle of conservation of energy. Closed system of equations</p> <p>Introduction to reology</p> <p>Elements of the ideal fluid theory: Euler equation, Bernoulli equation</p> <p>Elements of the real fluid theory: Navier-Stoke's equation, dynamic similarity of flows</p> <p>Introduction to aerodynamics</p> <p>Summary</p>		
<b>Assessment methods</b>	<p>Informative lecture with audio-visual resources</p> <p>Two control works</p>		
<b>Recommended readings</b>	<p>1. Y.A. Cengel, J.M. Cimbala, Fluid Mechanics: Fundamentals and Applications, McGraw-Hill Education, 2017, 4th edition</p> <p>2. F.M. White, Fluid mechanics, McGraw-Hill Education, 2017, 8th edition</p> <p>3. P.K. Kundu, I.M. Cohen, D.R. Dowling, Fluid Mechanics, Academic Press, 2015, 6th edition</p>		
<b>Knowledge</b>	<p>Students who successfully complete this course will have demonstrated an ability to:</p> <p>1. Know the definitions of fundamental concepts of fluid mechanics including: continuum, velocity field; viscosity, surface tension and pressure (absolute and gage); flow visualization using timelines, path lines, streamlines, and streamlines; flow regimes: laminar, turbulent;</p> <p>2. Apply the basic equation of fluid statics to determine forces on planar and curved surfaces that are submerged in a static fluid; to manometers; to the determination of buoyancy and stability; and to fluids in rigid-body motion;</p> <p>3. Use of conservation laws in differential forms and apply them to determine velocities, pressures and acceleration in a moving fluid. Understand the kinematics of fluid particles, including the concepts of substantive derivatives, local and convective accelerations, vorticity and circulation;</p> <p>4. Use Euler's and Bernoulli's equations and the conservation of mass to determine velocities, pressures, and accelerations for incompressible and inviscid fluids;</p> <p>5. Understand the concepts of static, thermodynamic, stagnation, total, and dynamic pressures and how they are used in instrumentation;</p> <p>6. Apply principles of dimensional analysis and similitude to simple problems and use dimensionless parameters;</p> <p>7. Determine flow rates, pressure changes, minor and major head losses for viscous flows through pipes, ducts, simple networks and the effects of pumps, fans, and blowers in such systems;</p> <p>8. Design simple pipe systems to deliver fluids under specified conditions;</p> <p>9. Understand the concepts of viscous boundary layers and the momentum integral and use them to determine integral thicknesses, wall shear stresses, and skin friction coefficients</p>		
<b>Skills</b>	After successful completing of this course the students should be able to use the theoretical knowledge about fluid mechanics to solve practical problems in real live and at future work place.		
<b>Other social competences</b>	Students are aware of importance and understanding of the effects and results of engineering activities of Fluid Mechanics		

<b>Course title</b>	Functional materials		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / lecture		
<b>Person responsible for the course</b>	Janusz Typek	<b>E-mail address to the person</b>	Janusz.Typek@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-19	<b>ECTS points</b>	5
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	4	<b>Hours per semester</b>	60
<b>Objectives of the course</b>	<p>Knowledge of basic classes of functional and multifunctional materials. Understanding of dependence of their specific properties on their structure. Ability of selection of materials and their structure for given practical applications.</p> <p>To be able to execute and describe lab experiments with functional materials.</p> <p>Student will be able to work in a group.</p>		
<b>Entry requirements</b>	Basic knowledge of solid materials and electromagnetism is expected. Knowledge of condensed matter physics on the level of typical undergraduate course is highly useful but not required.		
<b>Course contents</b>	<p>Introduction to lab experiments and lab reports</p> <p>Lab experiment: ferroelectrics</p> <p>Lab experiment: ferromagnets</p> <p>Lab experiment: piezoelectrics</p> <p>Lab experiment: Magnetic nanomaterials.</p> <p>Presentation of lab reports</p> <p>Electronic structure of materials (band structure in crystalline solids, classification of materials based on their electronic structure).</p> <p>Semiconducting materials (basic properties of semiconductors, transport properties, heterostructures and their applications).</p> <p>Magnetic materials (magnetic ordering, magnetic materials: metals, alloys, ferromagnetic oxides, and compounds, magnetic resonance).</p> <p>Nanomaterials - properties and applications.</p> <p>The final test.</p>		
<b>Assessment methods</b>	<p>Lecture</p> <p>Experiment demonstrations.</p> <p>Lab reports grading.</p> <p>Test grading.</p> <p>Observation of student involvement in group work.</p>		
<b>Recommended readings</b>	<p>1. Klaus D. Sattler (ed.), Handbook of Nanophysics: Functional nanomaterials, CRC Press, 2011</p> <p>2. F. Duan, J. Guojun, Introduction to Condensed Matter Physics, World Scientific, 2005</p> <p>3. J. Typek, Laboratory experiments instructions, Web page: <a href="http://www.typjan.zut.edu.pl">www.typjan.zut.edu.pl</a>, Institute of Physics, Szczecin, 2015</p>		
<b>Knowledge</b>	Student will have knowledge of basic classes of functional and multifunctional materials, will understand the dependence of their specific properties on structure.		
<b>Skills</b>	Student will be able to conduct lab experiment and prepare lab report.		
<b>Other social competences</b>	Student is able to work in group.		

<b>Course title</b>	Heat transfer		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	lecturing course / lecture		
<b>Person responsible for the course</b>	Anna Majchrzycka	<b>E-mail address to the person</b>	Anna.Majchrzycka@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-20	<b>ECTS points</b>	4
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	4	<b>Hours per semester</b>	60
<b>Objectives of the course</b>	Heat transfer is course introducing the fundamental principles of heat transfer and simple engineering applications. Upon successful completion of this course, the student will understand the fundamentals of heat transfer and will have skills to perform calculations of heat transfer and heat exchangers.		
<b>Entry requirements</b>	Mathematics, physics, chemistry recommended		
<b>Course contents</b>	<p>Solution of the problems covering the contents of the lectures</p> <p>Basics of heat transfer. Fourier's Law of Heat Conduction, thermal conductivity, steady conduction in solids with plane, cylindrical and spherical isothermal surfaces. Theory of convection: free, mixed and forced convection. The Newton's Law of cooling, The heat transfer coefficient. Heat transfer at solid fluid boundaries of uniform heat transfer coefficients at the surfaces. Heat transfer between fluids inside and outside pipes overall heat transfer coefficient, critical and economical thickness of pipe insulation. Dimensional analysis,. Flow in pipes with uniform surface heat transfer coefficient. Boiling.Condensation. Fins , fins' efficiency. Radiation: introduction, Planck's Law, Wien's Law, Stefan-Boltzmann Law, Kirchhoff's Law , Lambert's Law. Radiation between black surfaces separated by non-absorbing medium, view factor.Heat exchangers: classification, basic design methods of heat exchangers ,LMTD logarithmic mean temperature difference,e- NTU-method .</p>		
<b>Assessment methods</b>	<p>Lecture , PPT presentation</p> <p>Tutorials ( classes)</p> <p>Written examination</p> <p>End-of -term test</p>		
<b>Recommended readings</b>	<ol style="list-style-type: none"> <li>1. Sadik Kakac, Hongtan Liu, Heat exchangers Selection , Rating and Thermal Design, CRC Press, BOCA RATON, LONDON,NEW YORK, WASHINGTON DC, 2002, ISBN 0-8493-0992-6, SECOND EDITION</li> <li>2. Benson, Rowland S., Advanced engineering thermodynamics, 1977</li> <li>3. Bejan, Adrian, Advanced engineering thermodynamics, 1988</li> <li>4. Hollman J.P-Thermodynamics, Thermodynamics, Mc Graw-Hill,, 1988</li> <li>5. Howell, John R., Fundamentals of engineering thermodynamics, 1987</li> </ol>		
<b>Knowledge</b>	<p>Students has knowledge on heat transfer theory and heat exchangers.</p> <p>Student has knowledge on solution methods of heat transfer and heat exchangers problems.</p>		
<b>Skills</b>	<p>Student is able to analyse and solve problems in the field of heat transfer.</p> <p>Student is able to apply knowledge and use know-how to complete tasks and solve problems of heat transfer and heat exchangers.</p>		
<b>Other social competences</b>	Following the course, the student will acquire the following attitudes: proactive in development of his/her professional and personal competence, creativity in respect to heat transfer problems.		

<b>Course title</b>	Industrial controls		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / lecture		
<b>Person responsible for the course</b>	Andrzej Bodnar	<b>E-mail address to the person</b>	Andrzej.Bodnar@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-22	<b>ECTS points</b>	4
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	3	<b>Hours per semester</b>	45
<b>Objectives of the course</b>	<p>The lecture gives basic knowledge on control methods, control systems structure and their applications. Basic characteristics of the systems are explained and discussed.</p> <p>Students understand working principles of various control systems, know their application area and basic rules of programming their operation, are prepared to operate them. Students know typical elements of control systems like controllers, sensors, transducers, converters, relays, logical elements.</p> <p>Laboratory enables to deepen and apply the knowledge in practice, and operate selected control systems. Students are able to assess quality of control using different indexes of quality or system characteristics.</p> <p>Student can work effectively in a group.</p>		
<b>Entry requirements</b>	<p>Math knowledge on differentiation, integration, complex numbers and functions of complex variable. Basic knowledge on electrical DC and AC current circuits.</p>		
<b>Course contents</b>	<p>Relays. Logical functions and timers. Sensors. PLC controller. CNC systems. Servo drive.</p> <p>Control tasks and corresponding solutions. Relays and logic control. Programmable logic controllers and their programming. Continuous and digital control systems. Typical controllers. Structure of a computerised control system. A/D and D/A conversion. Sensors, transducers and signal conditioning systems. Control errors, control quality and indexes, system stability. CNC systems for controlling machine tools. Motion control. Fuzzy logic control. Microcomputers as controllers. Industrial communications.</p>		
<b>Assessment methods</b>	<p>Lecture and laboratory</p> <p>Term test and laboratory reports.</p> <p>Observation of student's work.</p>		
<b>Recommended readings</b>	<ol style="list-style-type: none"> <li>1. Bartelt T., Industrial automated systems, Delmar, Cengage Learning, New York, 2011</li> <li>2. de Silva C.W., Mechatronics. A foundation course, CRC Press, Boca Raton, 2010</li> <li>3. Solomon S., Sensors and control systems in manufacturing, McGraw Hill, New York, 2010</li> </ol>		
<b>Knowledge</b>	<p>Students have basic knowledge on control methods, control systems structure and their applications, can explain basic characteristics of the systems.</p> <p>Students understand working principles of various control systems, know their application area and basic rules of programming their operation, and are prepared to operate them. Students know typical elements of control systems like controllers, sensors, transducers, converters, relays, logical elements, are able to assess quality of control using different indexes of quality or system characteristics.</p>		
<b>Skills</b>	<p>Students can apply in practice the knowledge obtained in lectures, operate selected control systems and program their operation. Students can properly select sensors necessary for the operation of a given system. Students are able to assess quality of control using different indexes of quality or system characteristics.</p>		
<b>Other social competences</b>	<p>Students can operate in teams.</p>		

<b>Course title</b>	Introduction to mechatronics		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	lecture		
<b>Person responsible for the course</b>	Andrzej Bodnar	<b>E-mail address to the person</b>	Andrzej.Bodnar@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-23	<b>ECTS points</b>	3
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	2	<b>Hours per semester</b>	30
<b>Objectives of the course</b>	<p>The lecture gives basic knowledge on mechatronic systems' components - description, properties, models, interfacing methods. Upon successful completion of this course the student should understand solutions and applications shown during lectures.</p> <p>Student should be able to analyse the system structure and individual subsystems of a mechatronic system. In future this skill can be used when designing mechatronic systems.</p> <p>Student understands the need of updating his knowledge by studying literature.</p>		
<b>Entry requirements</b>	Course on physics and electrical engineering. Some knowledge on electronic system is also welcomed.		
<b>Course contents</b>	<p>What is mechatronics, its research area and applications. Examples of mechatronic systems. Sensors of position, temperature, pressure, flow, acoustic and optical sensors, micro sensors. Signal conditioning. Actuators - piezo, magneto-, electrodynamic, hydraulic, electric motors, Control systems. Logical systems, PLC. Digital and analog inputs and outputs of the control system. A/C and C/A converters, conversion errors. Analog and digital filters.</p> <p>Microcontrollers. Communication - displays and keyboards, computer mouse, serial and parallel ports, network access. Timers and counters. Remarks on programming and debugging.</p> <p>Mechatronic design. Modeling and simulation of mechanical structures, actuators and control systems. Mechatronic systems reliability.</p>		
<b>Assessment methods</b>	<p>Lecture.</p> <p>Two written tests.</p> <p>Observation of student's activity.</p>		
<b>Recommended readings</b>	1. Bolton W., Mechatronics, Prentice Hall, London, 1999, 2-nd ed.		
<b>Knowledge</b>	Students have knowledge on mechatronic systems components - description, properties, models, interfacing methods. Upon successful completion of this course the student should understand solutions and applications shown during lectures.		
<b>Skills</b>	Students are able to analyse a mechatronic system structure and its individual subsystems. Students can apply in practice a number of ready-to-use mechatronic solutions.		
<b>Other social competences</b>	Students understand the role and can engage in studying subject literature individually.		

<b>Course title</b>	Manufacturing techniques I		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / lecture		
<b>Person responsible for the course</b>	Małgorzata Garbiak	<b>E-mail address to the person</b>	Malgorzata.Garbiak@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-25	<b>ECTS points</b>	5
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	4	<b>Hours per semester</b>	60
<b>Objectives of the course</b>	<p>to explain the role of technology in the metal casting and plastic working processes</p> <p>to describe the way of how a casting is made through design, moulding, pouring, cleaning and defects inspection</p> <p>student has the knowledge on blanking, piercing, deep drawing and stress state in deformed parts</p> <p>basics of dies construction</p>		
<b>Entry requirements</b>	basic knowledge in chemistry and physics		
<b>Course contents</b>	<p>Construction of dies for blanking and piercing</p> <p>Determination of the work hardening curves of the steel</p> <p>Influence of the sheet thickness and the module pressing on the folding flange during deep drawing</p> <p>Construction of the wire drawing die</p> <p>Casting design</p> <p>The moulding material: preparation, properties and testing</p> <p>Production techniques I - the manufacture of sand castings</p> <p>Production techniques II - the manufacture of sand castings</p> <p>Inspection of defects in castings</p> <p>Hot mechanical working of steel: purpose, range and effects. Forging: metal flow under impact pressure, fibre direction, preliminary forging operations, designing forgings. Forge plant equipment: forging equipment, hammers, forging presses. Hot die forging: dies and tools. Hot upset machine forging: description of forging machine, requirements, factors governing upsetting. Cold forming of metals: processes, fabrication of metals by cold working, presses and dies. Processes for shaping sheet: warm pressing and drawing</p> <p>Fundamentals of metal casting, casting design, melting furnaces, production techniques, solidification structure, defects in castings, properties of castings, inspection of casting quality, casting alloys.</p>		
<b>Assessment methods</b>	<p>lectures, description, explanation</p> <p>discussion</p> <p>laboratory exercises, laboratory manufacturing of elements</p> <p>laboratory reports grading</p> <p>writing exam</p>		
<b>Recommended readings</b>	<ol style="list-style-type: none"> <li>1. Campbell J., Castings, Butterworth-Heinemann, 2003</li> <li>2. Beeley P., Foundry technology, Butterworth-Heinemann, 2001</li> <li>3. Metals Handbook v.4 Forming, 2003</li> <li>4. Metals Handbook v.5 Forging and Casting, 2003</li> <li>5. Helmi A. Youssef, Hassan A.El-Hofy, Mhoud H.Ahmed, Manufacturing Technology, 2003</li> </ol>		
<b>Knowledge</b>	Student has knowledge necessary to understand technological processes of shaping materials structure and properties and forming products by casting and plastic working techniques		
<b>Skills</b>	Student has skills in forming products by casting and plastic working techniques		
<b>Other social competences</b>	Student can think and act in creative way and cooperate and work in team		

<b>Course title</b>	Materials Science I		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / lecture		
<b>Person responsible for the course</b>	Małgorzata Garbiak	<b>E-mail address to the person</b>	Malgorzata.Garbiak@zut.edu.pl
<b>Course code (if applicable)</b>	WIMIM	<b>ECTS points</b>	3
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	2	<b>Hours per semester</b>	30
<b>Objectives of the course</b>	student has knowledge of fundamentals in materials science encompassing Miller indices, phase transformations, phase equilibrium diagrams, alloys structure, necessary to understand process of creating metal alloys morphology		
<b>Entry requirements</b>	basic knowledge in chemistry and physics		
<b>Course contents</b>	unit cell, lattice directions and planes, Miller indices, phase equilibrium diagrams, liquidus, solidus, solidification curves, Fe-C system, alloys microstructure bonding in solids, elements of crystallography, translation lattice, crystal system, lattice planes and directions, Miller indices, lattice defects, solid state phases, solid solutions and compounds, polymorphism, phase transformations, phase diagrams, Fe-C system, steels and cast irons nucleation and solidification		
<b>Assessment methods</b>	lecture / explanation laboratory exercise lab reports grading written exam		
<b>Recommended readings</b>	1. Callister W.D. Rethwisch D.G., Fundamentals of materials science and engineering, Willey&Sons, 2013 2. Christian J.W., The theory of transformations in metals and alloys, Pergamon Press, 2002 3. Kleber W., Introduction to crystallography, Veb Verlag Technik, 2011		
<b>Knowledge</b>	Student has knowledge of fundamentals of materials science		
<b>Skills</b>	Student can interpret crystallographic indices and analyse and use phase equilibrium systems		
<b>Other social competences</b>	Student has awareness of complexity of materials and understand the need of life-long learning		

<b>Course title</b>	Measurements and industrial instrumentation		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / lecture		
<b>Person responsible for the course</b>	Andrzej Bodnar	<b>E-mail address to the person</b>	Andrzej.Bodnar@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-28	<b>ECTS points</b>	5
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	3	<b>Hours per semester</b>	45
<b>Objectives of the course</b>	<p>The lecture gives basic knowledge on measurements theory and measurement errors. The main part of lecture and laboratory is connected with sensors and industrial measuring systems and their elements. Students understand working principles of various types of sensors and transducers, understand the influence of errors on measurements.</p> <p>Laboratory exercises help students to deepen and apply their knowledge when solving practical problems. Students can properly select elements for building measuring path (sensors, transducers, instruments, storage, interfaces) and signal processing methods for different measured quantities, can carry out measurements and assess values of different kinds of measurement errors.</p> <p>Students can effectively work in small groups.</p>		
<b>Entry requirements</b>	Basic knowledge on DC and AC circuits; magnetic field characteristics of materials.		
<b>Course contents</b>	<p>Measurement instrumentation. Measurement of displacement, velocity and acceleration. Measurement of force, torque and pressure. Strain gage measurements. Temperature measurements. Signal conditioning. Electrical measurements. Assessment of measurement accuracy.</p> <p>Introduction to metrology. Standards. Generalized measurement system. Measurement models. Static and dynamic response. Errors in measurements. Principles, sensors and transducers for measuring distance, motion parameters, force, pressure, strain, weight, shape, flow, temperature, illuminance, electrical, acoustic and chemical quantities,. MEMS sensors. Measuring instruments. Calibration. Data visualisation, storage and transmission. Interfacing. Signal conditioning. A/D conversion. Computer aided inspection. Computer based measuring systems. Actuators for active testing. Noise in measured signals.</p>		
<b>Assessment methods</b>	<p>Lecture and laboratory.</p> <p>Two term-time tests. Laboratory reports.</p> <p>Observation of student's activity.</p>		
<b>Recommended readings</b>	<ol style="list-style-type: none"> <li>1. Bartelt T., Industrial automated systems., Delmar, Cengage Learning, New York, 2011</li> <li>2. Soloman S., Sensors and control systems in manufacturing, McGraw Hill, New York, 2010</li> <li>3. de Silva C.W., Mechatronics. A foundation course, CRC Press, Boca Raton, 2010</li> </ol>		
<b>Knowledge</b>	Students have basic knowledge on measurements theory and measurement errors, understand working principles and characteristics of sensors, transducers and industrial measuring systems, and their elements. Students know how to select elements for building measuring path (sensors, transducers, instruments, storage, interfaces) and signal processing methods for different measured quantities and measure precision, know how to assess values of different kinds of measurement errors.		
<b>Skills</b>	Students can solve practical problems connected with measurements in industrial conditions. Can properly select and apply various types of sensors and transducers or other elements for building measuring path (sensors, transducers, instruments, storage, interfaces) and signal processing methods for different measured quantities. Students can carry out measurements and assess values of different kinds of measurement errors.		
<b>Other social competences</b>	Students can effectively work in teams.		

<b>Course title</b>	Measurement Uncertainty: Methods and Applications		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / lecture		
<b>Person responsible for the course</b>	Janusz Typek	<b>E-mail address to the person</b>	Janusz.Typek@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-27	<b>ECTS points</b>	4
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	2	<b>Hours per semester</b>	30
<b>Objectives of the course</b>	<p>To teach methods of uncertainty calculations and to teach skills to use this knowledge in practical applications.</p> <p>To acquire skills to use the obtained knowledge in practical applications in lab experiments.</p> <p>To develop ability to work in a group.</p>		
<b>Entry requirements</b>	<p>Basic mathematics and physics</p> <p>Basic mathematics and physics.</p>		
<b>Course contents</b>	<p>Execution of lab experiment.</p> <p>Preparation of lab report.</p> <p>Basic concepts (uncertainty, error, probability distributions), evaluation of standard uncertainty (type A and B), combined and expanded standard uncertainty</p> <p>Graphical presentation of data, fitting functions to data, computer programs to calculate uncertainties.</p> <p>Bayesian analysis.</p> <p>Final test and presentation</p>		
<b>Assessment methods</b>	<p>Lecture.</p> <p>Lab experiment demonstration.</p> <p>Lab report grading</p> <p>The final test.</p> <p>Observation of class activity.</p>		
<b>Recommended readings</b>	<p>1. Guide to the expression of uncertainty in measurement, BIPM's website, <a href="http://www.bipm.org">www.bipm.org</a>, 2010</p> <p>2. An introduction to the "Guide to the expression of uncertainty in measurement", BIPM's website, <a href="http://www.bipm.org">www.bipm.org</a>, 2009</p> <p>3. H. J. C. Berendsen, A Student's Guide to Data and Error Analysis, Cambridge University Press, 2011</p>		
<b>Knowledge</b>	<p>To acquire knowledge about basic concepts (uncertainty, error, probability distributions), evaluation of standard uncertainty (type A and B), combined and expanded standard uncertainty. To know about graphical presentation of data, fitting functions to data, computer programs to calculate uncertainties, about Bayesian analysis, and preparation of lab reports.</p>		
<b>Skills</b>	<p>Student will be able to correctly calculate measurements uncertainty, construct graphical presentation of obtained data, use computer program to calculate uncertainties.</p>		
<b>Other social competences</b>	<p>Student acquires ability to work in group.</p>		

<b>Course title</b>	Metal and ceramic composites		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	lecture		
<b>Person responsible for the course</b>	Anna Biedunkiewicz	<b>E-mail address to the person</b>	Anna.Biedunkiewicz@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-30	<b>ECTS points</b>	3
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	2	<b>Hours per semester</b>	30
<b>Objectives of the course</b>	Acquisition of knowledge on the structure and properties of metal and ceramic composites for their production techniques. Shaping the skills of selection of ceramic materials to given conditions.		
<b>Entry requirements</b>	Fundamentals of physics, chemistry, and materials science		
<b>Course contents</b>	<p>Basics of metal and ceramic matrix composites</p> <p>Matrices of metal and ceramic matrix composites.</p> <p>Characteristics of the reinforcing fibers, and their effect on composite mechanical properties.</p> <p>Properties of metal matrix composites dispersion-strengthened composites.</p> <p>Manufacturing of metal and ceramic matrix composites.</p> <p>Reactive consolidation.</p> <p>Predicting of metal matrix and ceramic-matrix composites properties.</p> <p>Mechanism of strengthening.</p> <p>Mechanism of reinforcement</p> <p>Metal and ceramic-matrix nanocomposites.</p> <p>Advanced applications of metal and ceramic matrix composites.</p> <p>Concrete</p> <p>Sandwich structures.</p>		
<b>Assessment methods</b>	<p>Information lecture</p> <p>Problem lecture</p> <p>Didactic film</p> <p>Homework in the middle of semester</p> <p>Written exam or essay - to be chosen by students</p>		
<b>Recommended readings</b>	<p>1. Barbero Ever, J., Introduction to composite materials design, CRC Press/Taylor &amp; Francis Group, 2011</p> <p>2. Decolon Christian,, Analysis of composite structures, Kogan Page Science, London, 2004</p> <p>3. Tsai Stephen W. , Red, Strength &amp; life of composite, 3. Tsai Stephen W. , Red Strength &amp;Composites Design Group. Department of Aeronautics &amp; Astronautics, Stanford University, cop., Stanford, 2008</p> <p>4. Kamal K.Kar Editor,, Composite Materials, Springer-Verlag, 2017</p>		
<b>Knowledge</b>	Ma wiedzę w zakresie zjawisk związanych z właściwościami materiałów konstrukcyjnych.		
<b>Skills</b>	potrafi na podstawie teorii budowy materii rozwiązywać proste zadania dotyczące problemów materiałowo technologicznych		
<b>Other social competences</b>	potrafi określić priorytety dotyczące wyboru właściwego rozwiązania problemu technologiczno - materiałowego dla zadanych warunków eksploatacji i uwarunkowań produkcyjnych		

<b>Course title</b>	Metallic Materials		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / lecture		
<b>Person responsible for the course</b>	Małgorzata Garbiak	<b>E-mail address to the person</b>	Malgorzata.Garbiak@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-29	<b>ECTS points</b>	5
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	4	<b>Hours per semester</b>	60
<b>Objectives of the course</b>	<p>To familiarize students with the history of the development of metal materials</p> <p>To acquaint students with the influence of the chemical composition and technological of state on the microstructure and properties of metallic materials</p> <p>To familiarize students with the methods of the testing of the properties of metallic materials</p> <p>To acquaint students with methods of molding properties of metallic materials by heat treatment methods</p>		
<b>Entry requirements</b>	<p>Fundamentals of materials science. Basic knowledge of the chemical composition, structure of the materials and physicochemical transformation</p> <p>Fundamentals of mechanics and strength of materials</p> <p>Computer techniques knowledge</p>		
<b>Course contents</b>	<p>The influence of the carbon content and the cooling rate after austenitization the properties of the steel</p> <p>Effect of austenitizing temperature on hardness of steel after hardening</p> <p>Effect of austenitizing time on hardness of the steel after hardening</p> <p>The influence of the cooling medium on the properties of the steel</p> <p>The effect of alloying elements on the hardenability of the steel</p> <p>The effect of tempering temperature on the properties of the steel</p> <p>The susceptibility of temper unalloyed and alloyed steels</p> <p>Heat treatment of carbon tool steels</p> <p>Heat treatment of high speedtool steels</p> <p>The deformation strengthening of aluminium alloys</p> <p>The precipitation strengthening of aluminium alloys</p> <p>The deformation strengthening of cooper alloys</p> <p>The precipitation strengthening of cooper alloys</p> <p>Microscopic analysis of the microstructure of steel and cast alloys</p> <p>Microscopic analysis of non-ferrous alloys</p> <p>The history of development of materials and their clasification</p> <p>Solutions and Iron-Carbon Phase Diagram</p> <p>The Microstructure of Carbon Steel at Room Temperature</p> <p>The Mechanical Properties of the Steel</p> <p>The Microstructure and Properties of the Low-Alloy Steels</p> <p>Diffusion - A Mechanism for Atom Migration within a Metal</p> <p>Austenitization</p> <p>Control of Grain Size by Heat Treatment and Forging</p> <p>Hardenability of Steel</p> <p>Tempering</p> <p>Quenching</p> <p>Stainless Steel</p> <p>Tool Steels</p> <p>Copper Alloys</p> <p>Aluminum Alloys</p>		
<b>Assessment methods</b>	<p>informative lecture</p> <p>laboratory assessment of the influence of carbon and alloying elements and parameters of austenitization on the properties of the metallic materials</p> <p>Rating messages acquired during lectures and self-study in the field of metallic materials based on the writing exam</p> <p>Rating messages based on reports from the laboratorium</p>		
<b>Recommended readings</b>	<p>1. George E. Totten, Rating messages based on reports from the laboratorium, WSP, Warszawa, 1993</p> <p>2. Dieter G.E., Mechanical Metallurgy, International Structural Edition, John Willey, Mertals Handbook, 1981</p>		

3. Mitchel E. Bever, Encyclopedia of Materials Science and Engineering, Pergamon Press

<b>Knowledge</b>	As a result of studies, the student should know the basic types of metallic materials, dependence on the microstructure and properties as a function of chemical composition. The methods of forming and evaluating properties of metallic materials
<b>Skills</b>	Students should be able to choose and shape properties of a metallic material for a specific application. Students should be able to assess the properties of materials in various of technological states
<b>Other social competences</b>	The result of the student's participation in the classes is shaping student attitudes necessary to work effectively in a team.

<b>Course title</b>	Metal machining		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / lecture		
<b>Person responsible for the course</b>	Janusz Cieloszyk	<b>E-mail address to the person</b>	Janusz.Cieloszyk@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-31	<b>ECTS points</b>	5
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	6	<b>Hours per semester</b>	90
<b>Objectives of the course</b>	<p>Course Objectives:</p> <ol style="list-style-type: none"> <li>1.To familiarize the student with tool nomenclature and cutting process</li> <li>2 To familiarize students with the effects of process: tolerances, dimensions and shape and the geometric structure of the surface.</li> <li>3. To give knowledge about heat distribution and thermal aspects of machining</li> <li>4. To impart knowledge on tool materials, tool life and tool wear.</li> <li>5. To educate students on failure analysis of cutting tools</li> <li>6. To familiarize the student with typicla cutting process: Parting, Turning, Boring, Milling, Drilling, Grooving, Threading; Grinding, Honing -machine.</li> <li>7. To impart knowledge on possibility and limitations of different process</li> </ol>		
<b>Entry requirements</b>	technical drawing, engineering graphics, mechanics, materials science		
<b>Course contents</b>	<ol style="list-style-type: none"> <li>1.Saving,</li> <li>2. Parting,</li> <li>3.Turning I</li> <li>4.Turning II</li> <li>5.Grinding I</li> <li>6.Grinding II</li> <li>7.Milling I</li> <li>8.Milling II</li> <li>9.Drilling,broach</li> <li>10.Threading,</li> <li>11.Gear manufacturing</li> <li>12.Tool wear</li> <li>13.Tool, regeneration of tools, measurement tools</li> <li>14.Electrical discharge machining</li> <li>15. Machinability,</li> </ol> <p>Development of machine tool technology: rolling, casting, deep drawing, sheet-metal working, electro discharge machining and modern metal cutting.</p> <p>Tools, cutting conditions. Machinability. Workpiece materials-classification. Tool materials and constructions. Tool wear. Establishing the machining method in relation to surface texture and tolerance.</p> <p>Typical metal cutting process: Parting, Turning, Boring, Milling, Drilling, Grooving, Threading; Grinding, Honing -machine.</p> <p>Machining – latest trends Laser-assisted machining (LAM), (HSM) high speed machining, (HSC) Hard machining (turning), Dry machining, Near-dry machining, Near-net-shape machining. Machining difficult-to-machine materials. Machining economics. Cutting fluid.</p> <p>Erosion machining; electrical discharge machining (EDM), laser machining (LM), water jet machining (WJM)</p>		
<b>Assessment methods</b>	<p>Lectures, reading assignments, projects, discussions, video presentations, multimedia presentations, and web content</p> <p>Student attendance and participation in class sessions play a vital role in successful course completion. Students will be expected to complete written tests, projects, and homework assignments as specified by the teacher</p>		
<b>Recommended readings</b>	<ol style="list-style-type: none"> <li>1. Grzesik W., Advanced Machining Processes of Metallic Materials,, Elsevier, 2008</li> <li>2. Shaw M. C.,, Metal Cutting Principles,, Oxford Univ. Press., Oxford, 1996</li> <li>3. Modern Metal Cutting,, AB Sandvik Coromant 1994, Sandviken, Sweden, 1994</li> </ol>		
<b>Knowledge</b>	<p>Upon successful completion of this course, the student will be competent to perform the following:</p> <ul style="list-style-type: none"> <li>• Understand various terminologies associated with the physics of metal cutting.</li> <li>• Recognize three major types of chips that are produced from various metals and understand the mechanics of chip formation during metal cutting operations.</li> <li>• Explain the factors that affect the machinability of metals.</li> <li>• Describe the differences between high carbon steel, tool steel and alloy steel.</li> <li>• Assess the effects of temperature and cutting fluids on surface finish as well as their influence on the machinability of metals.</li> </ul>		
<b>Skills</b>	<p>Designs the general form of manufacturing processes for typical parts, eg roller, wheel, gear, body, disc</p> <p>Uses methods of machining and assembly, conditions for their implementation in the case of typical parts (bodies, gears, shafts, screws, etc.) and assemblies</p> <p>Selects elements of the MTHW system (machine tool, holder, tool, object) for transitions, operations in various manufacturing methods</p>		
<b>Other social competences</b>	<p>It will assess the relationship between the costs and features of any parts and the techniques for their production. He will apply and evaluate pre-requisite technological processes for the manufacture of any products in the machine industry. Understand the importance and conditioning of manufacturing techniques in the process of creating any products in the machine industry.</p>		

<b>Course title</b>	Modeling and Simulation of Manufacturing Systems		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / lecture		
<b>Person responsible for the course</b>	Andrzej Jardzioch	<b>E-mail address to the person</b>	Andrzej.Jardzioch@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-32	<b>ECTS points</b>	5
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	4	<b>Hours per semester</b>	60
<b>Objectives of the course</b>	This course deals with the technique of simulation. Simulation is often used to support management and design decisions in complex production systems.		
<b>Entry requirements</b>	Basics of Manufacturing Systems		
<b>Course contents</b>	<p>The laboratory will be given in a computer lab, where the corresponding production systems are modeled and the performance measures are analyzed using standard simulation software. During the course, the students will work on several assignments and cases.</p> <p>Introduction to modeling and simulation. What is modeling of Manufacturing Systems? What is Simulation of Manufacturing Systems? Schematic of a simulation study. How to develop simulation Model? How to design a simulation experiment? How to perform Simulation Analysis? An example. What makes a problem suitable for simulation modeling and analysis? Simulation software - Plant Simulation.</p>		
<b>Assessment methods</b>	<p>Lecture, laboratory and workshop.</p> <p>Student attendance and participation in class sessions play a vital role in successful course completion. Students will be expected to complete written tests, projects, and homework assignments as specified by the teacher</p>		
<b>Recommended readings</b>	<p>1. Steffen Bangsow, Tecnomatix Plant Simulation, Modeling and Programming by Means of Examples, Springer, Cham Heidelberg New York Dordrecht London, 2015</p> <p>2. Jardzioch A. Jaskowski J., MODELING OF HIGH STORAGE SHEET DEPOT WITH PLANT SIMULATION, Adv. Sci. Technol. Res. J. 2013; 7(17):14-22, Adv. Sci. Technol. Res. J. 2013; 7(17):14-22, 2013, Adv. Sci. Technol. Res. J. 2013; 7(17):14-22</p>		
<b>Knowledge</b>	Students have basic knowledge on methods of description, modeling and simulation of mechanical and mechatronic systems as well as production processes.		
<b>Skills</b>	Upon successful completion of this course the student should be able to prepare data and models and carry out computer simulations of mechatronic systems and typical production processes.		
<b>Other social competences</b>	Students can effectively work in a team.		

<b>Course title</b>	Modellierung und Simulation von Materialflusssystemen		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / lecture		
<b>Person responsible for the course</b>	Andrzej Jardzioch	<b>E-mail address to the person</b>	Andrzej.Jardzioch@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-50	<b>ECTS points</b>	5
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	german
<b>Hours per week</b>	4	<b>Hours per semester</b>	60
<b>Objectives of the course</b>	Students can build simple models of manufacturing systems and prepare input data for computer simulation of manufacturing systems and typical production processes, can analyze and interpret the results.		
<b>Entry requirements</b>	Basic information about manufacturing systems.		
<b>Course contents</b>	<p>Dieser Kurs befasst sich mit der Technik der Simulation. Simulationen werden häufig verwendet, um Management- und Entwurfsentscheidungen in komplexen Produktionssystemen zu unterstützen. Das Labor wird in einem Computerlabor eingerichtet, in dem die entsprechenden Produktionssysteme modelliert und die Leistungsmessungen mit einer Standardsimulationssoftware analysiert werden. Während des Kurses analysieren die Schüler verschiedene Beispiele aus der Praxis</p> <p>Dieser Kurs befasst sich mit der Technik der Simulation. Das Labor wird in einem Computerlabor eingerichtet, in dem die entsprechenden Produktionssysteme modelliert und die Leistungsmessungen mit einer Standardsimulationssoftware analysiert werden. Während des Kurses analysieren die Schüler verschiedene Beispiele aus der Praxis.</p>		
<b>Assessment methods</b>	<p>Aufgabe / Arbeit an Fallstudien (einzeln und in Gruppen), Präsentation, Teilnahme am Unterricht, Laborberichte.</p> <p>Two written tests.</p> <p>Observation of student's activity.</p>		
<b>Recommended readings</b>	<p>1. Bangsow Steffan, Use Cases of Discrete Event Simulation: Appliance and Research, Springer Verlag, 2012</p> <p>2. MengChu Zhou, Kurapati Venkatesh, Modeling, Simulation, and Control of Flexible Manufacturing Systems,, World Scientific Publishing, 1999</p>		
<b>Knowledge</b>	Students have a basic knowledge of the methods and tools for modeling and simulation research of production processes		
<b>Skills</b>	Upon successful completion of this course the student should be able to prepare data and models and carry out computer simulations of typical production processes.		
<b>Other social competences</b>	Students can effectively work in a team.		

<b>Course title</b>	Modern processes in manufacturing		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / lecture		
<b>Person responsible for the course</b>	Janusz Cieloszyk	<b>E-mail address to the person</b>	Janusz.Cieloszyk@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-33	<b>ECTS points</b>	4
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	3	<b>Hours per semester</b>	45
<b>Objectives of the course</b>	<p>Course Objectives:</p> <ol style="list-style-type: none"> <li>1.To familiarize the student with no conventional machining methods</li> <li>2. To familiarize the student with EDM. WEDM, WJM, LAM, HM, RET, burnishing on machining process:</li> <li>3. To familiarize the student with burnishing process on CNC cutting machines:</li> <li>4. To impart knowledge on possibility and limitations of different not conventional machining methods</li> </ol>		
<b>Entry requirements</b>	engineering graphics, mechanics, materials science, metal machining		
<b>Course contents</b>	<ol style="list-style-type: none"> <li>1.Drilling operation and thermal friction drilling operation</li> <li>2.Burnishing process to improve the final quality of form tools (moulds and dies) on turning and milling machines</li> <li>3.Turning, threading, rolling and thread rolling on cutting machines</li> <li>4.Turning and turning with self- propelled rotate tool</li> <li>5.Spining tools -new conception of machining</li> <li>6.Saving, parting, electrical discharge machining</li> <li>7.Machining of no conventional construction material</li> </ol> <p>INTRODUCTION: NON CONVENTIONAL MACHINING PROCESSES (NCMP), Non traditional machining, Definitions of various NCMP . Classification of NCMP, Historical background of new NCMP Technological processes.</p> <p>Non-traditional cutting processes, new spinning turning, mill-turning, new rotary tools RET; driven (DRET) or selfpropelled (SPRET).</p> <p>Erosion machining; laser machining (LM), water jet machining (WJM)</p> <p>ELECTRICAL DISCHARGE MACHINING (EDM): Fundamental principle of EDM, Equipments required for EDM process parameters, process capabilities. Application example trouble shooting, Wire EDM, Process principle and parameters, process capacities and its applications.</p> <p>Form drill, form tap machining.</p> <p>Rolling and thread rolling on cutting machines. Vibration-assisted machining (VAM)</p> <p>Cutting a technique called hybrid; Jet Assisted Machining (JAM) and Thermal Enhanced Machining (TEM), Air Jet Assisted Machining, Laser-assisted machining (LAM).</p> <p>Burnishing (Plastic working) on machine tools; machining of any surface surfaces, holes, 3D spatial surfaces, thread processing. Application, advantages and disadvantages.</p> <p>Curved surface finishing with flexible abrasive tool.</p>		
<b>Assessment methods</b>	<p>Lectures, reading assignments, projects, discussions, video presentations, multimedia presentations, and web content</p> <p>Student attendance and participation in class sessions play a vital role in successful course completion.</p> <p>Students will be expected to complete written tests, projects, and homework assignments as specified by the teacher</p>		
<b>Recommended readings</b>	<ol style="list-style-type: none"> <li>1. Davim J.P., Machining of Hard Materials., Springer 2010, London, 2010</li> <li>2. A collection of new articles, papers assigned to the topics, 2011</li> </ol>		
<b>Knowledge</b>	<p>Upon successful completion of this course, the student will be competent to perform the following:</p> <ul style="list-style-type: none"> <li>• Understand various terminologies associated with the physics of Non-traditional cutting processes, new spinning turning, mill-turning, new rotary tools; driven (DRT) or selfpropelled (SPRT). cutting a technique called hybrid; Jet Assisted Machining (JAM) and Thermal Enhanced Machining (TEM), Air Jet Assisted Machining, Laser-assisted machining (LAM). Form drill, form tap machining.</li> <li>• Selct non-traditional machining processes for the given technological task,</li> </ul>		
<b>Skills</b>	<p>Upon successful completion of this course, the student will be competent to perform the following:</p> <ul style="list-style-type: none"> <li>• Selct non-traditional machining processes: new spinning turning, mill-turning, new rotary tools; driven (DRT) or selfpropelled (SPRT), cutting a technique called hybrid, Jet Assisted Machining (JAM) and Thermal Enhanced Machining (TEM), Air Jet Assisted Machining, Laser-assisted machining (LAM), Form drill, form tap machining for the given technological task.</li> </ul>		
<b>Other social competences</b>	<p>It will assess the relationship between the costs and features of any parts and the not conventiona ltechniques for their production. He will apply and evaluate pre-requisite technological not conventional processes for the manufacture of any products in the machine industry. Understand the importance and conditioning of not conventional manufacturing techniques in the process of creating any products in the machine industry.</p>		

<b>Course title</b>	Modern welding		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / lecture		
<b>Person responsible for the course</b>	Adam Sajek	<b>E-mail address to the person</b>	Adam.Sajek@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-49	<b>ECTS points</b>	4
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	3	<b>Hours per semester</b>	45
<b>Objectives of the course</b>	Gaining knowledge about the principles of metal joining Knowing the fundamental differences between the processes		
<b>Entry requirements</b>	Basics of Manufacturing Technology		
<b>Course contents</b>	Shielded Metal Arc Welding Gas Tungsten Arc Welding Submerged Arc Welding Automated Gas Metal Arc Welding Welding in Augmented Reality Manual Laser Welding Brief introduction to metal technology Welding fundamentals (SMAW as the primal process) Why Flux Cored Arc Welding displacing regular GMAW? Still attractive Gas Tungsten Arc Welding Invaluable Thermal Cutting processes (plasma, laser and oxyfuel - welding & cutting) Review of the modern processes (special processes and resistance welding) Welding technology in practice (professional welding) The reason of welding processes measurements Computer Aided Welding Economics of living, working and welding technology		
<b>Assessment methods</b>	Informative lecture with multimedial aids Laboratories: welding equipment presentation, joints welding by students Rating messages acquired during written tests and lab reports Students receives the final grade based on w written work on defined subject		
<b>Recommended readings</b>	1. David H. Phillips, Welding Engineering: An Introduction, John Wiley & Sons, 2016 2. Andrew D. Althouse, Carl H. Turnquist, William A. Bowditch, Kevin E. Bowditch, and Mark A. Bowditch, Modern Welding, 12th Edition, Goodheart-Willcox, 2018		
<b>Knowledge</b>	The student will have the knowledge about modern welding processes and practical application due to conditions of efficiency and economics.		
<b>Skills</b>	Student will be able to apply the obtained knowledge to solve a common problems and use it in the regular welding.		
<b>Other social competences</b>	Student will be able to work in a team to solve problems through critical thinking.		

<b>Course title</b>	Monitoring of machine tools and machining processes		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / lecture		
<b>Person responsible for the course</b>	Andrzej Bodnar	<b>E-mail address to the person</b>	Andrzej.Bodnar@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM	<b>ECTS points</b>	4
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	3	<b>Hours per semester</b>	45
<b>Objectives of the course</b>	<p>The lecture gives basic knowledge on theory and methods used for diagnosing machines, machine tools and cutting processes, their monitoring or supervision. Many practical examples of diagnostic processes and monitoring systems are presented. They are mainly connected with machine tools and machining processes. The course will give students basic knowledge necessary for using and developing simple monitoring systems. Student can use basic theoretical knowledge about methods used for diagnosing machines, machine tools and cutting processes, their monitoring or supervision. tudent Student can determine the structure of simple diagnostic and monitoring systems.</p> <p>Student can cooperat effectively in a team.</p>		
<b>Entry requirements</b>	Basic knowledge on machine tools and cutting. Basics of measurements – sensors and methods.		
<b>Course contents</b>	<p>Diagnostic data classification and different techniques of signal processing for failure or disturbance detection (e.g. FFT, STFT, WT, correlation, PCA etc.).</p> <p>Diagnostics and monitoring of systems and processes. Main concept. Role of system modelling. Selection of signals and signal processing. Symptoms. Classification problems. Limit values. Examples of monitoring algorithms. Failures in machine tool subsystems. Ccutting process disturbances. Cutting process and cutting tool monitoring problems. Practical applications – examples of machine tools monitoring, monitoring of cutting process stability, monitoring of rotating machinery.</p>		
<b>Assessment methods</b>	<p>Lecture and laboratory</p> <p>Two term-time tests, laboratory reports.</p> <p>Final test.</p> <p>Observation of student;s activity.</p>		
<b>Recommended readings</b>	<ol style="list-style-type: none"> <li>1. Rowland J.R., Linear Control Systems. Modeling, analysis, and design, John Wiley, New York, 1986</li> <li>2. Clarence W. de Silva, Modeling and control of engineering systems, CRC Press/Taylor &amp; Francis Group, 2009</li> <li>3. Natke H.G., Cempel C., Model-Aided Diagnosis of Mechanical Systems. Fundamentals, Detection, Localization, Assessment, Springer, Berlin, 1997</li> </ol>		
<b>Knowledge</b>	<p>Student knows theory and methods used for diagnosing machines, machine tools and cutting processes, their monitoring or supervision.</p> <p>Student knows many practical examples of diagnostic processes and monitoring systems, especially those connected with machine tools and machining processes.</p>		
<b>Skills</b>	Students can effectively use monitoring systems, can build formulea for signals processing, can formulate symptoms and determine limit values. .		
<b>Other social competences</b>	Students can cooperate in a team.		

<b>Course title</b>	Nanomaterials		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	lecture		
<b>Person responsible for the course</b>	Anna Biedunkiewicz	<b>E-mail address to the person</b>	Anna.Biedunkiewicz@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-34	<b>ECTS points</b>	3
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	2	<b>Hours per semester</b>	30
<b>Objectives of the course</b>	Making students knowledge about the nanomaterials, nanocomposites and advanced technologies of their manufacturing and investigation.		
<b>Entry requirements</b>	Basic knowledge of the chemical composition, structure, materials and physicochemical changes. Basic knowledge of the materials testing.		
<b>Course contents</b>	Nanoparticles, nanomaterials, nanocomposites - definitions and fundamental classification. Materials Science at the nanoscale. Synthesis and properties of nanostructural coatings. Manufacturing processes. Sintering of nanoceramics. Nanoceramics. Nanocomposites. Mechanical and nanomechanical properties. Polymer nanocomposites: definitions, structures, key factors, application potential. Nanofillers to polymers: classification, structures, physical properties. The effects of nanofillers on polymer systems. Characterization tools. Direct Methods: optical, electron, and scanning probe microscopy. Indirect methods: diffraction techniques for periodic structures.		
<b>Assessment methods</b>	Informative lecture with audiovisual aids, ie. educational movies, computer presentations . After participation in lecture the student proceeds to pass a written exam and receive a passing grade.		
<b>Recommended readings</b>	<ol style="list-style-type: none"> <li>1. Brechignac C., Houdy P., Lahmani M., Nanomaterials and Nanochemistry, Springer, Berlin, Heidelberg, New York, 2007</li> <li>2. Y.Gogotsi, Nanomaterials Handbook, CRC Taylor &amp; Francis, 2006</li> <li>3. Klein L.C., Processing of nanostructured sol-gel materials [in] Edelstein A.S., Cammarata R.C. (ed.), Nanomaterials: synthesis, properties and applications, Institute of Physics Publishing, Bristol, Filadelfia, 1996</li> <li>4. Gupta R.K., Kennel E., Polymer nanocomposites handbook, CRC Press, 2008</li> <li>5. Mai Y.W., Yu Z-Z., Polymer nanocomposites, CRC Press, 2006</li> <li>6. Wang Z., L., Characterization of nanophase materials, Wiley-VCH, Weinheim, 2000</li> <li>7. Kny E., Nanocomposite materials, Trans Tech. Pub.Ltd, Zurich, Enfield, 2009</li> </ol>		
<b>Knowledge</b>	Student has widened knowledge about nanomaterials science and methods of manufacturing or synthesis selected nanomaterials. Student has widened knowledge about methods and tools used for nanomaterials characterization.		
<b>Skills</b>	Students can use sources of literature, seek and follow the development of new technologies, advanced materials and methods their indentification.		
<b>Other social competences</b>	Student has awareness that nanotechnology makes it possible to achieve very large effects with a minimal amount of material and that applicability to some products is limited from enviromental point of view.		

<b>Course title</b>	Numerical methods in technical computing		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / lecture		
<b>Person responsible for the course</b>	Andrzej Bodnar	<b>E-mail address to the person</b>	Andrzej.Bodnar@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-35	<b>ECTS points</b>	5
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	3	<b>Hours per semester</b>	45
<b>Objectives of the course</b>	<p>Student will develop understanding of mathematical bases of numerical methods used in problems arising in engineering and technology. Student will be prepared to apply their knowledge at future industrial or scientific work or further study.</p> <p>Student will demonstrate the ability to apply numerical methods for experimental data processing like approximation, interpolation, curve fitting, smoothing, finding poles and zeros of functions, solving sets of equations or ordinary differential equations, finding signal transforms and other.</p> <p>Student will be able to cooperate in small groups.</p> <p>Student can study subject literature individually.</p>		
<b>Entry requirements</b>	Finished course on mathematics (at least 2 semesters).		
<b>Course contents</b>	<p>Laboratory works in MATLAB (based on representative practical examples) on approximation, interpolation, curve fitting, smoothing, finding poles and zeros of functions, numerical integration, solving sets of linear and nonlinear equations or ordinary differential equations, finding Fourier or wavelet transforms.</p> <p>Mathematical principles and simple examples of individual numerical methods: approximation, interpolation, curve fitting and smoothing of experimental data, finding poles and zeros of functions, solving sets of linear equations or ordinary differential equations, finding signal transforms.</p>		
<b>Assessment methods</b>	<p>Lectures and laboratory.</p> <p>Written test; laboratory reports.</p> <p>Observation of student's work.</p>		
<b>Recommended readings</b>	1. Moler C.B., Numerical computing with MATLAB., The MathWorks, Inc., Natic, Massachusetts, 2004		
<b>Knowledge</b>	Student understand mathematical bases of numerical methods used in problems arising in engineering and technology.		
<b>Skills</b>	<p>Student will demonstrate the ability to apply numerical methods for experimental data processing like approximation, interpolation, curve fitting, smoothing, finding poles and zeros of functions, solving sets of equations or ordinary differential equations, finding signal transforms.</p> <p>Student is prepared to further study and to application of the knowledge in his scientific work or for solving problems met in industry.</p>		
<b>Other social competences</b>	Student understands necessity of further development of his knowledge and skills. Student can cooperate in a group.		

<b>Course title</b>	Physics of renewable energy sources		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / lecture		
<b>Person responsible for the course</b>	Janusz Typek	<b>E-mail address to the person</b>	Janusz.Typek@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-39	<b>ECTS points</b>	4
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	3	<b>Hours per semester</b>	45
<b>Objectives of the course</b>	<p>To understand physical ideas and issues associated with renewable forms of energy.  To gain experience in dealing with practical applications  To understand physical ideas and issues associated with renewable forms of energy.  To gain experience in dealing with practical applications.  To learn working in a group.</p>		
<b>Entry requirements</b>	<p>General knowledge of physics and mathematics. Ability to perform laboratory measurements, general knowledge of measurement techniques and basics of data processing.  General knowledge of physics and mathematics. Ability to perform laboratory measurements, general knowledge of measurement techniques and basics of data processing.</p>		
<b>Course contents</b>	<p>Execution of lab experiments  Introduction to solar energy. The Sun as energy producer. Characteristics of solar radiation  Introduction to photovoltaic, band structure of solid state, photovoltaic effect, characteristics of the solar cells, solar collectors.  Heat pumps  Fuel cells.  Wind energy-wind power, Betz' law, basic parameters of the wind, wind turbines. Water energy, ocean energy (OTEC, tidal, wave, salinity difference), conversion of water energy. Origin of geothermal energy, geothermal energy systems, heat pumps. Biomass energy and biomass energy systems  Technologies devoted to storage and transfer of energy.  The final test</p>		
<b>Assessment methods</b>	<p>Lecture  Lab experiment demonstration  Laboratory reports (65%) and home prepared essay on selected subject (35%).  Laboratory reports.  Final test  Observation of class activity</p>		
<b>Recommended readings</b>	<p>1. C. Julien Chen, Physics of Solar Energy, John Wiley &amp; Sons, Hoboken, New Jersey, 2011  2. B. Sorensen, Renewable energy, Elsevier, 2011  3. Lab instructions, PHYWE System GmbH, Goettingen, 2011</p>		
<b>Knowledge</b>	Student will understand physical ideas and issues associated with renewable forms of energy.		
<b>Skills</b>	Student can perform and fully analysed lab experiments on the subject of renewable energy sources.		
<b>Other social competences</b>	Student will be able to work in a group.		

<b>Course title</b>	Polymer Processing		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / lecture		
<b>Person responsible for the course</b>	Magdalena Kwiatkowska	<b>E-mail address to the person</b>	Magdalena.Kwiatkowska@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-48	<b>ECTS points</b>	4
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	3	<b>Hours per semester</b>	45
<b>Objectives of the course</b>	Providing students knowledge on thermal processing of polymer materials, their theoretical and practical aspects. Processing methods of thermoplastics, their effects of polymer structure and performance		
<b>Entry requirements</b>	Basic knowledge on thermoplastic polymer materials		
<b>Course contents</b>	Rheology of thermoplastics. Practical aspects of processing methods: extrusion molding, injection molding, compression moulding, thermoforming / vacuum molding. Methods of thermal joining. Introduction to polymer materials technology. Processability and rheology of thermoplastics. Material preparation for molding. Additives. Processing methods: extrusion molding - process realization and parameters, processing units, equipment design, production lines; injection molding - process realization and parameters, processing units, equipment design, different approaches to forming; compression moulding - different approaches to forming, processing units, final products; thermoforming / vacuum molding - process realization and parameters, processing units, final products; rotational moulding. Methods of thermal joining.		
<b>Assessment methods</b>	Informative lecture with multimedial aids (presentations, educational movies, etc.) Laboratories: processing equipment presentation in laboratories, experimental tests Student receives a final grade based on written tests and lab reports Student receives a final grade based on a written work on defined subject		
<b>Recommended readings</b>	1. Harper Ch.A., Handbook of Plastic Processes, Wiley Inc., Hoboken, 2006 2. Wilkinson A.N., Ryan A.J., Polymer Processing and Structure Development, Kluwer Acad., 1998 3. Cogswell F.N., Polymer Melt Rheology, Woodhead Pub. Ltd, Cambridge, 1997 4. Fridman M.L. (Edit.), Polymer Processing, Springer Verlag, 1990		
<b>Knowledge</b>	Student gains a knowledge on polymer materials chemical structure, physical transitions, and effects of thermal processing on formulated microstructure and materials performance, main aspects of polymer processability, typical methods of thermoplastic processing and joining, materials preparation for molding.		
<b>Skills</b>	Student is able to choose a suitable processing method regarding specified product form, to specify the processing aspects and conditions, is able to choose a method of joining polymer elements, is also able to operate some processing equipment		
<b>Other social competences</b>	Student can think and act in creative way and cooperate and work in team		

<b>Course title</b>	Power Generation Technologies		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	project course / lecture		
<b>Person responsible for the course</b>	Aleksandra Borsukiewicz	<b>E-mail address to the person</b>	Aleksandra.Borsukiewicz@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-33-L	<b>ECTS points</b>	4
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	3	<b>Hours per semester</b>	45
<b>Objectives of the course</b>	Students will be gave the fundamental knowledge about different ways of power generation technologies		
<b>Entry requirements</b>	Physics - level of first degree technical studies, Chemistry - level of first degree technical studies, Mathematics - level of first degree technical studies, Thermodynamics - level of first degree technical studies,		
<b>Course contents</b>	Project of power plant supplied by waste energy or geothermal energy or solar energy Introduction to electricity generation. Coal-fired power plants. Gas turbines and combined cycle power plants. Combined heat and power. Piston-engine-based power plants. Nuclear power. ORC based power plant. power from waste. Fuel cells. Hydropower. Solar power. Biomass-based power generation. Wind power. Geothermal power. Tidal and ocean power. Storage technologies. Hybrid power systems. Environmental consideration.		
<b>Assessment methods</b>	An informative and problem-oriented lecture Workshop Writing control work Report of project		
<b>Recommended readings</b>	<ol style="list-style-type: none"> <li>1. Breeze P., Power generation technologies, Elsevier, 2005</li> <li>2. Poullikkas A., Introduction to Power Generation Technologies, NOVA Science Publishers, 2009</li> <li>3. da Rosa A.D., Fundamentals of renewable energy processes, Elsevier, 2009</li> <li>4. Edited by Jean-Claude Sabonnadière, Low Emission Power Generation Technologies and Energy Management, John Wiley &amp; Sons, 2009</li> <li>5. Andrews J, Jelly N., Energy science, Principles, technologies and impacts, Oxford University Press, 2007</li> <li>6. Hore-Lacy I., Nuclear Energy in the 21st Century, World Nuclear University Press. 2nd edition, 2010</li> </ol>		

<b>Course title</b>	Pumps, Fans and Compressors		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / lecture		
<b>Person responsible for the course</b>	Zbigniew Zapałowicz	<b>E-mail address to the person</b>	Zbigniew.Zapalowicz@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-38	<b>ECTS points</b>	3
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	3	<b>Hours per semester</b>	45
<b>Objectives of the course</b>	Fundamentals information concern pumps, fans and compressors (classification of machines, constructions, characteristic parameters, methods of capacity regulation, characteristics, set of machines, methodology of selection) Tests of machines		
<b>Entry requirements</b>	Fundamental information from: physics, mathematics.		
<b>Course contents</b>	Test of centrifugal pump Test of centrifugal pumps - serial connections Test of centrifugal pumps - parallel connections Introduction (main information about machines to liquid and gas transport) Hydraulic losses. Hydraulic characteristic of pipe Serial and parallel connections of pipes. Equivalent hydraulic characteristic of pipe Classification of pumps. Definition of rotation pump. Principle of pump's operation Rotary pumps. Balance of energy for pumps Characteristic parameters. Heads. Capacities. Powers. Efficiencies Kinematic flow of fluid through the rotor Fundamental equation for rotation machines Losses in rotary pumps Characteristics of rotary pumps Regulation of pump's capacity Reciprocating pumps Series and parallel sets of pumps Constructions of pumps Fans. Classification of fans. Principles of operation. Characteristics. Constructions. Compressors. Classification of compressors. Principle of operation. Characteristics. Constructions.		
<b>Assessment methods</b>	Information lecture Control work		
<b>Recommended readings</b>	1. Rishel J., Water pumps and pumping system, MCGraw-Hill Professional, 2002		
<b>Knowledge</b>	Student knows: the phenomena that associated the flow of working fluid through the transport machines, design and exploit limitations, basic elements and principles of operation for pumps, fans and compressors Students knows the fundamental parameters and characteristics for pumps, fans and compressors and methods their regulation		
<b>Skills</b>	Student can to assessment the advantages and disadvantages of pumps, fans and compressors and can to select proper machines depends of their applications Student can to make the measurements of characteristic parameters and prepares characteristics of transport machine		
<b>Other social competences</b>	Student should be cooperate in group		

<b>Course title</b>	Recycling I		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	lecture		
<b>Person responsible for the course</b>	Sandra Paszkiewicz	<b>E-mail address to the person</b>	Sandra.Paszkiwicz@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-41	<b>ECTS points</b>	2
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	1	<b>Hours per semester</b>	15
<b>Objectives of the course</b>	Introduction to plastic recycling on the level which gives students the basic knowledge concerning the legislative, economical and technical issues.		
<b>Entry requirements</b>	Completed courses of Polymer Materials II and Polymer Processing I		
<b>Course contents</b>	<p>Introduction into plastic materials - definitions: recyclates, virgin grade materials etc.  The effect of processing on thermoplastics.  Reprocessing of thermoplastic recyclates.  Processing techniques.  Systems of collecting recyclable materials.  Machines and devices for recycling of polymers.  Sorting and processing recyclables.  Filtration of wastes in melting state.  Additives for recyclates. Lines for recycling of polymers.  The law regulations of recycling in the world.  Economical aspects of recycling of polymer materials.  The problem of recycling in perspective: Europe.  Rise of biopolymers</p>		
<b>Assessment methods</b>	<p>informative lectures, descriptions, explanations  discussion during the lectures  asking problematic questions during the lectures</p>		
<b>Recommended readings</b>	<p>1. La Mantia F., Handbook of Plastic Recycling, RapraTech., Shawbury, 2002  2. Scheirs J., Polymer recycling: Science, Technology and Applications, John Wiley and Sons, Chichester, 1998  3. Henstock M., Polymer Recycling, Rapra Technology, Shawbur, 2001  4. Bisio A., Xanthos M, How to Manage Plastic Waste, Hanser, Munich, 1994</p>		
<b>Knowledge</b>	<p>After completing the course, the student:  1. Has elementary knowledge of EU directives and EU legislation in the field of recycling.  2. Has basic knowledge on waste classification, segregation and disposal.  3. Can use the basic theoretical knowledge in the field of recycling to analyze the process of waste segregation</p>		
<b>Skills</b>	<p>1. Uses the acquired knowledge to solve dilemmas emerging in waste management. Analyzes waste management problems and proposes directional actions in this regard.  2. Can use the basic theoretical knowledge in the field of waste segregation.  3. He can see the connection of engineering decisions and their impact on environmental aspects.</p>		
<b>Other social competences</b>	<p>1. Understands the need to learn throughout life in order to raise their professional qualifications in the field of environmental protection and natural resources.  2. He can interact and work in a group and communicate effectively to solve the problem.  3. He can think and act in an entrepreneurial way with an understanding of the needs of society and the laws governing the natural environment.</p>		

<b>Course title</b>	Renewable energy sources		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	project course / lecture		
<b>Person responsible for the course</b>	Aleksandra Borsukiewicz	<b>E-mail address to the person</b>	Aleksandra.Borsukiewicz@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-37-Z	<b>ECTS points</b>	4
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	3	<b>Hours per semester</b>	45
<b>Objectives of the course</b>	Students will be gave the fundamental knowledge about different ways of power generation technologies		
<b>Entry requirements</b>	Physics - level of first degree technical studies, Chemistry - level of first degree technical studies, Mathematics - level of first degree technical studies, Thermodynamics - level of first degree technical studies,		
<b>Course contents</b>	Project of ORC power plant supplied by geothermal energy or solar energy Kinds of RES, Potential and reservoirs of RES on the World and Europe. Sun as energy source. Characteristic of solar radiation. Parameters characterized solar radiation. Losses of solar radiation in atmosphere. Thermal and photovoltaic conversion of solar radiation. Kinds of solar radiation converters. Passive systems of solar radiation using. Principle of function of thermal collectors and systems. Fundamentals of solar cells. Bohr's atomic model. The photo effect. Inner photo effect. Energy bands. Principle of solar cells. Crystal structure of silicon. PV effect in p-n junction. Defect conduction, intrinsic p - n junction. Solar cell principle with energy band model. Processes in irradiated solar cells. Spectral response of a solar cell. Technology of PV-cells and solar modules production.. Biomass. Biogas. Bio-fuels. Geothermal energy. Hydro energy. Tidal energy. Wave energy. Potential of water in oceans, sees and rivers. Conversion of water energy into electricity. Basic information deal power stations. Wind energy. Potential. Conversion of wind energy into electricity. Wind energy transformers. Storage systems of heat end electricity. Hydrogen. Production of hydrogen. Storage systems. Burning of hydrogen. Fuel cells - basic information. Perspective ways of conversion of RES		
<b>Assessment methods</b>	An informative and problem-oriented lecture Workshop Writing control work Report of project		
<b>Recommended readings</b>	1. da Rosa A.D., Fundamentals of renewable energy processes, Elsevier, 2009 2. Andrews J, Jelly N., Energy science, Principles, technologies and impacts, Oxford University Press, 2007 3. Edited by Jean-Claude Sabonnadière, Renewable Energies, John Wiley & Sons, 2009		

<b>Course title</b>	Solar energy		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	lecturing course / project course / lecture		
<b>Person responsible for the course</b>	Zbigniew Zapałowicz	<b>E-mail address to the person</b>	Zbigniew.Zapalowicz@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-42	<b>ECTS points</b>	4
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	4	<b>Hours per semester</b>	60
<b>Objectives of the course</b>	Fundamental information about thermal solar and PV installations		
<b>Entry requirements</b>	Fundamental physics		
<b>Course contents</b>	<p>Tutoriales according to lectures</p> <p>Project of solar and PV installations for fixed initial data</p> <p>Sun as energy sources. Characteristic of solar radiation.</p> <p>Parameters of solar radiation.</p> <p>Energy tranducers.</p> <p>Flat solar collectors -constuction, operation, energy balance</p> <p>Air collectors - construction, operation, energy balance</p> <p>Vaccum collectors - constructin, operation, energy balance</p> <p>Heat pipe collectors - construction, operation, energy balance</p> <p>Focusing collectors - kinds, construction, operation, energy balance</p> <p>Sun furance and thermal solar power installation,</p> <p>Heat storage in solar installations</p> <p>New type of collectors, Examples of solar installation</p> <p>Photovoltaic effect.</p> <p>Technology of PV cells production</p> <p>Kinds of PV cells</p> <p>Modules, panels and set of PV modules</p> <p>Characteristics of PV installation</p> <p>Elements of PV - installation</p> <p>Inverters, batteries</p> <p>Economical and ecological aspects of solar installations</p>		
<b>Assessment methods</b>	<p>Lectures, tutorials and project</p> <p>Control works and presentaion of project</p>		
<b>Recommended readings</b>	<p>1. Klugmann-Radziemska E., Fundamentals of Energy Generation, Wyd. Politechniki Gdańskiej, Gdańsk, 2009, pp.86-115</p> <p>2. Poulek V., Solar energy photovoltaics promising trend fpr today and close future, CUA, Praha, 2006</p> <p>3. Green M.T., Third generation photovoltaics: advanced solar energy conversion, 2010</p> <p>4. Galloway T, Solar house a guide for the solar designer, Elsevier, Oxford, 2007</p> <p>5. Planning andinstalling solar/thermal systems: a guide for installers, architects and engineers., Jamesjames Earthscan, Springer, Berlin, 2005</p>		
<b>Knowledge</b>	<p>Student knows the parameters and geometrical relations for solar radiation</p> <p>Student knows methods and devices to conversion of solar radiation into useful forms of energy (heat, electricity) and applications</p>		
<b>Skills</b>	<p>Student can to assessment the quantity of solar energy</p> <p>Student can to design the simply solar installation</p>		
<b>Other social competences</b>	Student can to professionally assessment the task concern solar installations		

<b>Course title</b>	Steam and Gas Turbines		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	lecturing course / lecture		
<b>Person responsible for the course</b>	Zbigniew Zapałowicz	<b>E-mail address to the person</b>	Zbigniew.Zapalowicz@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-43	<b>ECTS points</b>	3
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	3	<b>Hours per semester</b>	45
<b>Objectives of the course</b>	The fundamental knowledge deal to construction and operation of steam and gas turbines		
<b>Entry requirements</b>	Fundamental knowledge from: mechanics, hydromechanics, physics, thermodynamics		
<b>Course contents</b>	Tutoriales according to lectures Introduction(main information about turbines, axial and radial turbines; steam, gas and water turbines etc.) Steam floe in guide ring Steam flow in rotor vanes Impulse stage of steam turbine Reaction stage of steamturbine Curtis stage of steam turbine Mulltistage steam turbines Construction of steam turbines and its main parts Energy balance of steam turbine; energy losses Power regulation of steam turbine Operating of steam turbine Gas turbines in power station Gas flow in turbine Constructions of gas turbine Operating of gas turbine		
<b>Assessment methods</b>	lecture Exam		
<b>Recommended readings</b>	1. Peng W.W., Fundamentals of Turbomachniery, Jhon Wiley & Sons, New Jersey, 2008		
<b>Knowledge</b>	Student knows the fundamental parameters and idea of operation for turbine stages and for multistage turbine Student knows basic construction elements and their function in turbine Student knows the characteristics for turbines and methods of turbine power control		
<b>Skills</b>	Students can to assessment the advantages and disadvantages of turbine Students can to assessment the influence of characteristic parameters on turbine power		
<b>Other social competences</b>	Student should be permanently educate in the range of construction and operation of turbines		

<b>Course title</b>	Steuerung von flexiblen Bearbeitungssystemen		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / lecture		
<b>Person responsible for the course</b>	Andrzej Jardzioch	<b>E-mail address to the person</b>	Andrzej.Jardzioch@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-44	<b>ECTS points</b>	5
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	german
<b>Hours per week</b>	4	<b>Hours per semester</b>	60
<b>Objectives of the course</b>	Erwerb von Kenntnissen über die Struktur und Kontrolle von Fertigungssystemen		
<b>Entry requirements</b>	Grundlagen der Fertigungssysteme		
<b>Course contents</b>	<p>Steuerung Design eine flexible Fertigungszelle</p> <p>Steuerungsmodell flexible Produktionssystem</p> <p>Einteilung von Fertigungssystemen. Werkzeugsysteme. Werkstückflusssysteme</p> <p>Flexible Fertigungssysteme. Steuerung von flexiblen Bearbeitungssystemen</p> <p>Informations- und Materialfluss einer flexiblen Fertigungszelle. Steuerungsstruktur von flexiblen Fertigungssystemen. Funktionen der Steuerung eines flexiblen Fertigungssystems. Schritte zur Realisierung eines flexiblen Fertigungssystems.</p> <p>Einflussgrößen auf die Investitionsrechnung für flexible Fertigungssysteme. Kriterien für die Bildung von Teilefamilien. Schritte zur Realisierung eines flexiblen Fertigungssystems</p> <p>Simulation flexibler Fertigungssysteme. Beispiel eines Planungssystems. Layout eines flexiblen Fertigungssystems.</p>		
<b>Assessment methods</b>	<p>Vorlesungen, Übungen und Projekte.</p> <p>Bewertung wird anhand von Berichten abgeschlossen und aktive Teilnahme an Klassen ausgegeben werden</p>		
<b>Recommended readings</b>	<p>1. Springer, Roland; Meyer, Frank, Flexible Standardisierung von Arbeitsprozessen. Erfahrungen aus der betrieblichen Praxis., Franz Steiner, Stuttgart, 2006</p> <p>2. Warnecke, Hans-Jürgen, Die Montage im flexiblen Produktionsbetrieb. Technik, Organisation, Betriebswirtschaft, Springer, Berlin/Heidelberg/New York, 1996</p> <p>3. Bangsow, Steffen, Tecnomatix Plant Simulation Modeling and Programming by Means of Examples, Springer, Berlin, 2016</p>		
<b>Knowledge</b>	Der Student hat Kenntnisse über die Methoden zur Steuerung flexibler Produktionssysteme		
<b>Skills</b>	Der Student kann einen Musteralgorithmus zur Steuerung des Transportsubsystems entwerfen.		

<b>Course title</b>	Surface engineering		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / lecture		
<b>Person responsible for the course</b>	Jolanta Baranowska	<b>E-mail address to the person</b>	Jolanta.Baranowska@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-45	<b>ECTS points</b>	5
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	4	<b>Hours per semester</b>	60
<b>Objectives of the course</b>	Zapoznanie studentów z podstawowymi pojęciami związanymi z powierzchnią ciała stałego Introduction to basic surface phenomena taking place during surface formation and exploitation Introduction to basic properties of surface layer and methods of their characterisation Introduction to basic coatings technologies		
<b>Entry requirements</b>	basic knowledge about materials structure and phase transformation basics of mechanics and strength of materials		
<b>Course contents</b>	coatings technologies testing of the properties of the coatings; preparation of materials with coatings wear testing with a pin-on-disk tribology test corrosion test of coatings calculations basic definitions, properties of surface layers, surface phenomena (adsorption, absorption, diffusion), corrosion and tribological resistance of surface layers surface treatment and coatings technologies exam		
<b>Assessment methods</b>	lectures, descriptions, explanations discussion during the lectures laboratories asking problematic questions during the lectures lab reports grading writing exam		
<b>Recommended readings</b>	1. Ed. J.R.Davis, Surface Engineering for Corrosion and Wear Resistance, ASM International, Warszawa, 2001 2. Ed. G.W. Stachowiak,, Wear Materials, Mechanisms and Practice, John Wiley & Sons, Warszawa, 2005 3. Ed. A.A.Tracton, Coatings technology: Fundamentals, Testing and Processing Techniques, CRC, Warszawa, 2006		
<b>Knowledge</b>	Student can name the basic definitions related to surface Student can describe the basic properties of the surface layers Student is able to describe the basic phenomena at the interphase Student can name and describe basic coating technologies		
<b>Skills</b>	Student is able to test selected surface properties of the coatings Student is able to design and analyse the selected deposition process of coatings		
<b>Other social competences</b>	student is able to work in a team and present results of experiments		

<b>Course title</b>	Thermodynamics		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	lecturing course / lecture		
<b>Person responsible for the course</b>	Anna Majchrzycka	<b>E-mail address to the person</b>	Anna.Majchrzycka@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-46	<b>ECTS points</b>	4
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	4	<b>Hours per semester</b>	60
<b>Objectives of the course</b>	Thermodynamics is course dealing with energy and its transformation. It is a standard course that covers the First and Second Laws of Thermodynamics and concludes with applications on steam power plants, gas power cycles, and refrigeration. Upon successful completion of this course, the student will understand the fundamentals of energy and energy transfers.		
<b>Entry requirements</b>	Mathematics, physics, chemistry recommended		
<b>Course contents</b>	Solution of the problems regarding the contents of the lectures. Basic properties and concepts, work and heat, the first law of thermodynamics - closed systems, thermodynamic properties of pure substances and equations of state, open systems and the first law, the second law of thermodynamics and entropy, energy conversion - gas cycles, energy conversion - vapor cycles, combustion		
<b>Assessment methods</b>	Tutorials ( classes) - interactive method Lectures -PPTpresentation End -term - test Written examination		
<b>Recommended readings</b>	<ol style="list-style-type: none"> <li>1. Benson, Rowland S.- Advanced engineering thermodynamics,1977, Advanced engineering thermodynamics, 1977</li> <li>2. HolmanJ.P, Thermodynamics, McGraw Hill, 1988</li> <li>3. Howell, John R., Fundamentals of engineering thermodynamics, 1987</li> <li>4. Karlekar B.V, Thermodynamics for engineers, New York, 1983</li> <li>5. Ragone, David V.- Thermodynamics of materials. Vol. 1,21995., Thermodynamics of materials. Vol. 1, 1995</li> <li>6. Samir Sarkar, Fuels and combustion, CRC Press, 2009, 3 rd Edition, ISBN 9781 4398 25419</li> <li>7. Keating Eugene.L., Applied combustion, Marcl Dekker Inc., New York,Basel, Hong Kong, 2011, ISBN- 08247-8127-9</li> </ol>		
<b>Knowledge</b>	The student should be able to define basic concepts of thermodynamics and as well as identify and describe the thermodynamic processes. The student has knowledge regarding solution of thermodynamics problems.		
<b>Skills</b>	As a result of the course the student will be able to apply knowledge and use know-how to complete tasks and solve problems of thermodynamic processes. As a result of the course the student will be able to solve the problems regarding thermodynamic processes.		
<b>Other social competences</b>	The student will have proven ability to use knowledge, skills and personal competences in the field of thermodynamics.		

<b>Course title</b>	Tools in machining processes		
<b>Level of course</b>	first cycle		
<b>Teaching method</b>	laboratory course / project course / lecture		
<b>Person responsible for the course</b>	Janusz Cieloszyk	<b>E-mail address to the person</b>	Janusz.Cieloszyk@zut.edu.pl
<b>Course code (if applicable)</b>	WIMiM-1-47	<b>ECTS points</b>	5
<b>Semester</b>	winter/summer	<b>Language of instruction</b>	english
<b>Hours per week</b>	4	<b>Hours per semester</b>	60
<b>Objectives of the course</b>	<p>Course Objectives:</p> <ol style="list-style-type: none"> <li>1.To familiarize the student with tool nomenclature of tools</li> <li>2. To impart knowledge on tool materials, tool life and tool wear.</li> <li>3. To educate students on failure analysis of cutting tools</li> <li>4. To familiarize the student with typicla cutting tools: parting, turning, boring, milling, drilling, grooving, threading; grinding, honing,EDM.</li> </ol> <p>To familiarize the student with the technological processes of machining tools</p> <p>To familiarize the student with the principles of selecting cutting tools</p>		
<b>Entry requirements</b>	engineering graphics, metal machining		
<b>Course contents</b>	<p>Saving, parting and turning tools</p> <p>Milling tools</p> <p>Grinding tools</p> <p>Tool wear, Tool cutting tests</p> <p>Tool, regeneration of tools, measurement tools</p> <p>Electrical discharge machining tools</p> <p>Tools for machining gear and threads</p> <p>Design of special cutting or burnishing or erosion tool</p> <p>The technological process of the designed tool</p> <p>Tools in machining processes</p> <p>Tool materials and constructions, cutting conditions. machinability.</p> <p>Tool wear. tool life</p> <p>Cutting Tool Geometries</p> <p>Turning, Single-Point Cutting Tools</p> <p>Milling and Multi-Point Cutting Tools</p> <p>Cutting tool material</p> <p>Drilling tools</p> <p>Reaming, Counterboring and countersinking tools</p> <p>Threading tools</p> <p>Erosion tools</p> <p>Burnishing tools</p> <p>Diamond tools for machining</p> <p>Operation and regeneration cutting, erosion and burnishing tools</p> <p>Elements of design typical cutting, erosion and burnishing tools.</p> <p>Elements of technology cutting, erosion and burnishing tools</p>		
<b>Assessment methods</b>	<p>Lectures, reading assignments, projects, discussions, video presentations, multimedia presentations, and web content</p> <p>Student attendance and participation in class sessions play a vital role in successful course completion.</p> <p>Students will be expected to complete written tests, projects, and homework assignments as specified by the teacher</p>		
<b>Recommended readings</b>	<ol style="list-style-type: none"> <li>1. Modern Metal Cutting,, AB Sandvik Coromant, Sandviken, Sweden, 1994, 1</li> <li>2. Grzesik W.,, Advanced Machining Processes of Metallic Materials,, Elsevier, London, 2008, 1</li> <li>3. Davim J. P.,, Surface Integrity in Machining,, Springer-Verlag,, London, 2010, 1</li> <li>4. Catalog Kennametal, Kennametal, USA, 2018</li> <li>5. MITSUBISHI MATERIALS CORPORATION Catalogue, MITSUBISHI MATERIALS CORPORATION, Japonia, 2018</li> <li>6. ISCAR cutting tools catalog, ISCAR, Israel, 2018</li> </ol>		
<b>Knowledge</b>			

Upon successful completion of this course, the student will be competent to perform the following:

- Understand various terminologies associated with the cutting, erosive or burnishing tools
- Recognize major types of the cutting, erosive or burnishing tools
- Design special cutting, erosive or burnishing tools
- Is able to describe the tool geometry

Characterize and explain the contents of typical catalogs of tools in the book and web versions

**Skills**

Choose the right tool for the process  
Determine the correct operating conditions of the tool  
Regenerate tools

**Other social competences**

Upon successful completion of this course, the student will be competent to:  
understand and evaluate the importance of the tooling economy,  
understand and assess the importance of proper exploration.
